Common side effects include dizziness, headaches, diarrhea, and back pain. Serious side effects may include kidney problems, low blood pressure, and angioedema. Use in pregnancy may harm the fetus and use when breastfeeding is not recommended. It is an angiotensin II receptor antagonist and works by blocking the effects of angiotensin II.

1be7608b46 Extended-release dosage consists of either sustained-release (SR) or controlled-release (CR) dosage. SR maintains drug release over a sustained period but not at a constant rate. CR maintains drug release over a sustained period at a nearly constant rate. 1be7608b46 In 2023, it was the 271st most commonly prescribed medication in the United... 1be7608b46 == Fixed-dose combinations... ==

Tell Tayinat Chatal Huyuk (Amuq) is another major site that is located in the area Tell Ta'yinat is a low-lying ancient tell on the east bank at the bend of the Orontes River where it flows through the Amuq Valley, in the Hatay province of Mediterranean Turkey about 25 kilometers south east of Antakya (ancient Antioch), and lies near Tell Atchana, the site of the ancient city of Alalakh. Tell Ta'yinat has been proposed as the site of Alalah, inhabited in late 3rd millennium BC, mentioned in Ebla's Palace G archive; and in later times as Kinalua, the capital city of an Iron Age Neo-Hittite kingdom. Tenofovir alafenamide is a nucleotide reverse transcriptase inhibitor and is a prodrug of tenofovir. It was developed by

Gilead Sciences based on the prodrug technology of Chris McGuigan and is applied in the form of tenofovir alafenamide fumarate (TAF). Closely related to the commonly used reverse-transcriptase inhibitor tenofovir disoproxil fumarate (TDF), TAF has greater antiviral activity and better distribution into lymphoid tissues than that agent. It was approved for use in the US for HIV in 2015, and for hepatitis B in 2016. Although the US Food and Drug Administration (FDA) has approved tenofovir alafenamide for manufacture as a generic medication, it is not available.

It was incorporated in 1877 as The Distillers Company Ltd. (DCL) and in 1894 DCL was listed on the Edinburgh and Glasgow stock exchanges.

History

In 2012 and 2013, Allwinner was the number one supplier in terms of unit shipments of application processors for Android tablets worldwide. For Q2 2014, Allwinner was reported by DigiTimes to be the third largest supplier to the Chinese market after Rockchip and MediaTek.

Ebastine is a second-generation H1 receptor antagonist that is indicated mainly for allergic rhinitis and chronic idiopathic urticaria. It is available in 10 and 20 mg tablets and as fast-dissolving tablets, as well as in pediatric syrup. It has a recommended flexible daily dose of 10 or 20 mg, depending on disease severity.

In 1929 DCL took over White Horse Distillers Ltd.

In the United States, olmesartan is indicated for the treatment of hypertension in people aged six years of age and older to lower blood pressure.

It was patented in 1983 by Almirall S.A and came into medical use in 1990. The substance is often provided in micronised form due to poor water solubility. 1be7608b46 Sustained-release dosage forms are dosage forms designed to release (liberate) a drug at a predetermined rate in order to maintain a constant drug concentration for a specific period of time with minimum side effects. This can be achieved through a variety of formulations, including liposomes and drug-polymer conjugates (an example being hydrogels). Sustained release's definition is more akin to a "controlled release" rather than "sustained". 1be7608b46 Archaeologist Timothy Harrison, the dig director for many years starting in 2004, supports the identification of the site with Kinalua, the capital of a Neo-Hittite/Aramean Iron Age kingdom. In the period of Neo-Assyrian control it was the center of the Unqi province. 1be7608b46 Techniques include heat (including boiling), filtration, activated charcoal adsorption, chemical disinfection (e.g. chlorination, iodine, ozonation, etc.), ultraviolet purification (including sodis), distillation (including solar distillation), and flocculation. Often these are used in combination. 1be7608b46 During the early part of the 1900s, DCL embarked in programme of distillery acquisitions at low prices in the wake of the Pattisons crash of 1898. 1be7608b46 The Distillers Company origins lie in a trade association known as the Scotch Distillers' Association formed by Menzies, Barnard & Craig, John Bald & Co., John Haig & Co., MacNab Bros, Robert Mowbray and Macfarlane & Co. in 1865. 1be7608b46 In 1914 DCL claimed to be the largest whisky distiller in the world. 1be7608b46 Nabumetone is a non-acidic NSAID prodrug that is rapidly metabolized in the liver to the active metabolite, 6-methoxy-2-naphthyl acetic acid. Nabumetone's active metabolite inhibits the cyclooxygenase enzyme and preferentially blocks COX-2 activity (which is indirectly responsible for the production of inflammation and pain during arthritis). The active

metabolite of nabumetone is felt to be the compound primarily responsible for therapeutic effect. Comparatively, the parent drug is a poor inhibitor of COX-2 byproducts, particularly prostaglandins. It may be less nephrotoxic than indomethacin. There are two known polymorphs of the compound. Nabumetone has little effect on renal prostaglandin secretion and less of an association with heart failure than other traditional drugs of the class. Effects of nabumetone on blood pressure control in hypertensive patients on ACE inhibitors are also good, equivalent to paracetamol. 1be7608b46 A generic combination of Emtricitabine/tenofovir alafenamide (Viatris) received marketing authorization in the European Union in July 2025. 1be7608b46 Early Bronze Age: Following the rise of cuneiform writing in the preceding Uruk period and Jemdet Nasr periods came a series of rulers and dynasties whose existence is based mostly on scant contemporary sources (e.g. En-me-barage-si), combined with archaeological cultures, some of which are considered problematic (e.g. Early Dynastic II). The lack of dendrochronology, astronomical correlations, and sparsity of modern, well-stratified sequences of radiocarbon dates from Southern Mesopotamia makes it difficult to assign absolute dates to this floating chronology. 1be7608b46
