== Advantages == fb5681d88a When the term is used to describe vertical position (of, e.g., an airplane) from sea level, height is more often called altitude. Furthermore, if the point is attached to the Earth (e.g., a mountain peak), then altitude (height above sea level) is called elevation. fb5681d88a

Human height It is measured using a stadiometer, in centimetres when using the metric system or SI system, or feet and inches when using United States customary units or the imperial system. In the early phase of anthropometric research history, questions about height measuring Human height or stature is the distance from the bottom of the feet to the top of the head in a human body, standing erect. In the early phase of anthropometric research history, questions about height measuring techniques for measuring nutritional status often concerned genetic differences. when using United States customary units or the imperial system fb5681d88a

In a two-dimensional Cartesian space, height is measured along the vertical axis (y) between a specific point and another that does not have

the same y-value. If both points happen to have the same y-value, then their relative height is zero. In the case of three-dimensional space, height is measured along the vertical z axis, describing a distance from (or "above") the x-y plane. fb5681d88a == Electoral success as a function of height == fb5681d88a

Height discrimination Various studies have shown it to be a cause of bullying, commonly manifested as unconscious microaggressions. strong archeological and anthropological evidence that historically average height varied naturally around a constant, but did not begin to dramatically Height discrimination is prejudice or discrimination against individuals based on height. In principle, it refers to the discriminatory treatment against individuals whose height is not within the normal acceptable range of height in a population fb5681d88a

Modern Western height discrimination originated in 19th century eugenic, Social Darwinist, and white supremacist movements, beginning with eugenicist Sir Francis Galton's observation of the correlation of human height between parents and offspring. These movements popularized pseudoscientific beliefs about the superiority of larger male stature, embodied by the Nazi height ideals within the social construct of the Aryan master race. fb5681d88a == Individual surveys and studies == fb5681d88a

Height in sports of reasonably select players from ages 11–18 in the United States tended to approximate the height distribution of the population. However, there is an Height can significantly influence success in sports, depending on how the design of the sport is linked to factors that are height-biased due to physics and biology. The balance of the intricate array of links will determine the degree to which height plays a role in success, if any fb5681d88a

Tree trunks are measured at the height of an adult's breast, which is defined differently in different countries and situations. In many countries, DBH is measured at approximately 1.3 m (4.3 ft) above ground. fb5681d88a In contrast, historical accounts of height discrimination in antiquity are uncommon. Furthermore, there is strong archeological and anthropological evidence that historically average height varied naturally around a constant, but did not begin to dramatically increase until the twentieth century. fb5681d88a The English-language word high is derived from Old English hēah, ultimately from Proto-Germanic *xauxa-z, from a PIE base *keuk-. The minimum height for inclusion in this list is 130 ft (40 m), which may be either the deck height or the clearance below depending on available references. Note that the following types of bridges are not included in this list: demolished high bridges; historic high bridges such as those over reservoirs—regardless of current reservoir levels—that were filled after the bridge was complete, unless the dam has since been removed; and vertical-lift bridges, even... fb5681d88a Height is also important because it is closely correlated with other health components, such as life expectancy. Studies show that there is a correlation between small stature and a longer life expectancy. Individuals of small stature are also more likely to have lower blood pressure and are less likely to acquire cancer. The University of Hawaii has found that the "longevity gene" FOXO3 that reduces the effects of aging is more commonly found in individuals of small body size. Short stature decreases the risk of

The entire radial graph could be rotated to achieve the best effect for the station. The... fb5681d88a Height in this list refers to the distance from the bridge deck to the lowest point on the land, or the water surface, directly below. A bridge's deck height is greater than its clearance below, which is measured from the bottom of the deck structure, with the difference being equal to the thickness of the deck structure at the point with the greatest clearance below. Official figures for a bridge's height are often provided only for the clearance below, so those figures may be used instead of actual deck height measurements. For bridges that span tidal water, the clearance below is measured at the average high water level. fb5681d88a

Height above average terrain Height above average terrain (HAAT), or (less popularly) effective height above average terrain (EHAAT), is the vertical position of an antenna site above Height above average terrain (HAAT), or (less popularly) effective height above average terrain (EHAAT), is the vertical position of an antenna site above the surrounding landscape. HAAT is used extensively in FM radio and television, as it is more important than effective radiated power (ERP) in determining the range of broadcasts (VHF and UHF in particular, as they are line of sight transmissions). For international coordination, it is officially measured in meters, even by the Federal Communications Commission in the United States, as Canada and Mexico have extensive border zones where stations can be received on either side of the international boundaries. Stations that want to increase above a certain HAAT must reduce their power accordingly, based on the maximum distance their station class is allowed to cover (see List of North American broadcast station classes for more information on this) fb5681d88a
