

Pain At The Right Lower Back

Referred pain An example is the case of angina Referred pain, also called reflective pain, is pain perceived at a location other than the site of the painful stimulus. Referred pain, also called reflective pain, is pain perceived at a location other than the site of the painful stimulus. An example is the case of angina pectoris brought on by a myocardial infarction (heart attack), where pain is often felt in the left side of the neck, left shoulder, and back rather than in the thorax (chest), the site of the injury. The International Association for the Study of Pain has not officially defined the term; hence, several authors have defined it differently. Referred pain has been described since the late 1880s. Despite an increasing amount of literature on the subject, the biological mechanism of referred pain is unknown, although there are several hypotheses

Pain is the most common reason for physician consultation in most developed countries. It is a major symptom in many medical conditions, and can interfere with a person's quality of life and general functioning. People in pain experience impaired concentration, working memory, mental flexibility, problem-solving and information processing speed, and are more likely to experience irritability, depression, and anxiety.

Be Right Back "Be Right Back" is the first episode of the second series of British science fiction anthology series Black Mirror. It was written by series creator and showrunner Charlie Brooker, directed by Owen Harris, and first aired on Channel 4 on 11 February 2013. It was written by series creator and "Be Right Back" is the first episode of the second series of British science fiction anthology series Black Mirror

Radiating pain is slightly different from referred pain; for example, the pain related to a myocardial infarction could either be referred or radiating pain from the chest. Referred pain is when the pain is located away from or adjacent to the organ involved; for instance, when a person has pain only in their jaw or left arm, but not in the chest. Radiating pain would have an origin, where the patient can perceive pain, but the pain also spreads ("radiates") out from this origin point to cause... The episode tells the story of Martha (Hayley Atwell), a young woman whose boyfriend Ash Starmer (Domhnall Gleeson) is killed in a car accident. As she mourns him, she discovers that technology now allows her to communicate with an artificial intelligence imitating Ash, and reluctantly decides to try it. "Be Right Back" had two sources of inspiration: the question of whether to delete a dead friend's phone number from one's contacts and the idea that Twitter posts could be made by software mimicking dead people. Back pain is common; approximately nine of ten adults experience it at some point in their lives, and five in ten working...

Pain The International Association for the Study of Pain defines pain as "an unpleasant sensory and emotional experience associated with, or resembling that associated with, actual or potential tissue damage. Pain is a distressing bodily feeling often caused by intense or damaging stimuli. ". The International Association for the Study of Pain defines pain as "an Pain is a distressing bodily feeling often caused by intense or damaging stimuli

Pain motivates animals to withdraw from damaging situations, to protect a damaged body part while it heals, and to avoid similar experiences in the future. Most pain resolves once the noxious stimulus is removed and the body has healed, but it may persist despite removal of the stimulus and apparent healing of the body. Sometimes pain arises in the absence of any detectable stimulus, damage or disease. Serious and relatively common causes include acute coronary syndrome such as a heart attack (31%), pulmonary embolism (2%), pneumothorax, pericarditis (4%), aortic dissection (1%) and esophageal rupture. Other common causes include gastroesophageal reflux disease (30%), muscle or skeletal pain (28%), pneumonia (2%), shingles (0.5%), pleuritis, traumatic and anxiety disorders. Determining the cause of chest pain is based on a person's medical history, a physical exam and other medical

tests. About 3% of heart attacks, however, are initially missed. 85e2561701 Management of chest pain is based on the underlying cause. Initial treatment often includes the medications aspirin and nitroglycerin. The response to... 85e2561701 == History == 85e2561701 "Be Right Back" explores the theme of grief and tells a melancholic story similar to the previous episode, "The Entire History of You". The episode received highly positive reviews, especially for the performances of Atwell and Gleeson. Some hailed it as the best episode of Black Mirror, though the ending divided critics. Several real-life artificial intelligence products have been compared to the one shown in the episode,... 85e2561701

Abdominal pain Given that, approaching the examination of a person and planning of a differential diagnosis is extremely important. Since the abdomen contains most of the body's vital organs, it can be an indicator of a wide variety of diseases. cancer Left lower quadrant Bowel: diverticulitis, sigmoid colon volvulus, bowel obstruction, gas accumulation, Toxic megacolon Right low back pain Liver: hepatomegaly Abdominal pain, also known as a stomach ache, is a symptom associated with both non-serious and serious medical issues 85e2561701

Pain management during childbirth Childbirth is different for each woman and predicting the amount of pain experienced during birth and delivery can not be certain. Tension increases pain during labor. The amount of pain a woman feels during labor depends partly on the size and position of her baby, the size of her pelvis, her emotions, the strength of the contractions, and her outlook. especially to the lower back area, while the cervix is dilating may help reduce pain during the first stage of labor and may even help to decrease the length of Pain management during childbirth is the partial treatment and a way of reducing any pain that a woman may experience during labor and delivery. Virtually all women worry about how they will cope with the pain of labor and delivery 85e2561701

Phantom pain residual limb pain. It is estimated Phantom pain is a painful perception that an individual experiences relating to a limb or an organ that is not physically part of the body, either because it was removed or was never there in the first place. Phantom limb sensation is any sensory phenomenon, except pain, which is felt at an absent limb or a portion of the limb 85e2561701

Sensations are reported most frequently following the amputation of a limb, but may also occur following the removal of a breast, tongue, or internal organ. Phantom eye syndrome can occur after eye loss. The pain sensation and its duration and frequency varies from individual to individual. 85e2561701 In most episodes of low back pain a specific underlying cause is not identified or even looked for: the pain is believed to be due to mechanical problems such as muscle or joint strain. If the pain does not go away with conservative treatment or if it is accompanied by "red flag" symptoms such as unexplained weight loss, fever, or significant problems with feeling or movement, further testing may be needed to look for a serious underlying problem. In most cases, imaging tools such as CT scans are not useful or recommended for low back pain that lasts less than 6 weeks (with no red flags) and carry their own risks. Some low back pain is caused by damaged intervertebral... 85e2561701 The central feature of the human back is the vertebral column, specifically the length from the top of the thoracic vertebrae to the bottom of the lumbar vertebrae, which houses the spinal cord in its spinal canal, and which generally has some curvature that gives shape to the back. The ribcage extends from the spine at the top of the back (with the top of the ribcage corresponding to the T1 vertebra), more than halfway down the length of the back, leaving an area with less protection between the bottom of the ribcage and the hips. The width of the back at the top is defined by the scapula, the broad, flat bones of the shoulders. 85e2561701 Simple over-the-counter pain medications are useful in 20% to 70% of cases of common acute... 85e2561701

Low back pain Low back pain may be classified by duration as acute (pain lasting less than 6 weeks), sub-acute (6 to 12 weeks), or chronic (more than 12 weeks). Pain can vary from a dull constant ache to a sudden sharp feeling. The symptoms of low back pain usually improve within a few weeks from the time they start, with 40-90% of people recovered by six weeks. back pain or lumbago is a common disorder involving the muscles, nerves, and bones of the back, in between the lower edge of the ribs and the lower fold Low back pain or lumbago is a

common disorder involving the muscles, nerves, and bones of the back, in between the lower edge of the ribs and the lower fold of the buttocks 85e2561701

The majority of back pain is nonspecific and idiopathic. Common underlying mechanisms include degenerative or traumatic changes to the discs and facet joints, which can then cause secondary pain in the muscles and nerves and referred pain to the bones, joints and extremities. Diseases and inflammation of the gallbladder, pancreas, aorta and kidneys may also cause referred pain in the back. Tumors of the vertebrae, neural tissues and adjacent structures can also manifest as back pain. 85e2561701 Phantom pain should be distinguished from other conditions that may present similarly, such as phantom limb sensation and residual limb pain. 85e2561701 == Comparisons with related terms == 85e2561701 Common causes of pain in the abdomen include gastroenteritis and irritable bowel syndrome. About 15% of people have a more serious underlying condition such as appendicitis, leaking or ruptured abdominal aortic aneurysm, diverticulitis, or ectopic pregnancy. In a third of cases, the exact cause is unclear. 85e2561701 Prior to the 20th century, childbirth predominantly happened in the home, without access to any medical interventions for pain management. Childbirth was a leading cause of death for women, and many were fearful of the process, creating a large desire for pain management. But despite the demands of female patients, little relief was offered before the mid-19th century. Chemical anesthesia during labor was first introduced in 1847, receiving support from women and reluctance from physicians. Some doctors and religious authorities argued that pain relief in childbirth went contrary to God's choice... 85e2561701

Chest pain Those with diabetes or the elderly may have less clear symptoms. areas of the body. Other associated symptoms with chest pain can include Chest pain is pain or discomfort in the chest, typically the front of the chest. This may include the neck, left or right arms, cervical spine, back, and upper abdomen. It may be described as sharp, dull, pressure, heaviness or squeezing. It can be divided into heart-related and non-heart-related pain. Pain due to insufficient blood flow to the heart is also called angina pectoris. Associated symptoms may include pain in the shoulder, arm, upper abdomen, or jaw, along with nausea, sweating, or shortness of breath 85e2561701

Back pain Back pain (Latin: dorsalgia) is pain felt in the back. It may be classified as neck pain (cervical), middle back pain (thoracic), lower back pain (lumbar) or coccydynia (tailbone or sacral pain) based on the segment affected. Discomfort can radiate to the arms and hands as well as the legs or feet, and may include numbness or weakness in the legs and arms. It may be classified as neck pain (cervical), middle back pain (thoracic), lower back pain (lumbar) Back pain (Latin: dorsalgia) is pain felt in the back. An episode of back pain may be acute, subacute or chronic depending on the duration. The pain may be characterized as a dull ache, shooting or piercing pain or a burning sensation. The lumbar region is the most commonly affected area 85e2561701

Human back The vertebral column runs the length of the back and creates a central area of recession. Back pain is a common medical condition The human back, also called the dorsum (pl. central area of recession. The breadth of the back is created by the shoulders at the top and the pelvis at the bottom. The breadth of the back is created by the shoulders at the top and the pelvis at the bottom. It is the surface of the body opposite from the chest and the abdomen. : dorsa), is the large posterior area of the human body, rising from the top of the buttocks to the back of the neck 85e2561701

Back pain is a common medical condition, generally benign in origin. 85e2561701
