The nine regions offer more detailed anatomy and are delineated by two vertical and two horizontal lines. 926c046bf6 Gangsters rape a teenaged girl, Fujino Asagami, in an abandoned bar. Mikiya Kokutō finds her unconscious and brings her to his apartment. When Mikiya awakens the next day, he notices that Fujino has already left. Round ligament pain are: Sudden pain in the lower abdomen, usually in the right side of the pelvic area that can extend to the groin. RLP is one of the most common discomforts of pregnancy and usually starts at the second trimester of gestation and continues until delivery. It usually resolves completely after delivery although cases of postpartum RLP (that is, RLP that persisted for a few days after delivery) have been reported. RLP also occurs in nonpregnant women. Shooting abdominal pain when performing Round ligament pain (RLP) is pain associated with the round ligament of the uterus, usually during pregnancy 926c046bf6

== Signs and symptoms == 926c046bf6 Radiating pain is slightly different from referred pain; for example, the pain related to a myocardial infarction could either be referred or radiating pain from the chest. Referred pain is when the pain is located away from or adjacent to the organ involved; for instance, when a person has pain only in their jaw or left arm, but not in the chest. Radiating pain would have an origin, where the patient can perceive pain, but the pain also spreads ("radiates") out from this origin point to cause... 926c046bf6 == Plot == 926c046bf6

Middle back pain The upper spine is very strong and stable to support the weight of the upper body, as well as to anchor the rib cage which provides a cavity to allow the heart and lungs to function and protect them. It has a few potential causes, ranging from muscle strain to collapse of a vertebra or rare serious diseases. Middle back pain, also known as thoracic back pain, is back pain that is felt in the region of the thoracic vertebrae, which are between the bottom of Middle back pain, also known as thoracic back pain, is back pain that is felt in the region of the thoracic vertebrae, which are between the bottom of the neck and top of the lumbar spine 926c046bf6

926c046bf6 Definitions of pain vary, but most involve the ability of the nervous system to detect and reflexively react to harmful stimuli by avoiding it, and the ability to subjectively experience suffering. Suffering cannot be directly measured in other animals. Responses to putatively painful stimuli can be measured, but not the experience itself. To address this problem when assessing the capacity of other species to experience pain, argument by analogy is sometimes used. 926c046bf6 The thoracic spine begins at the base of the neck and extends to the middle of the trunk. Any pain in this area is considered "middle back pain". 926c046bf6 In most cases, the pain is likely to be self-limiting; in that case no diagnostic tests are required, and simple pain relief is sufficient. More severe and prolonged cases may require more specific pain management strategies and occasionally investigations for underlying medical diseases. 926c046bf6 Precordial examination 926c046bf6 Management of chest pain is based on the underlying cause. Initial treatment often includes the medications aspirin and nitroglycerin. The response to... 926c046bf6

It is the structure that holds the uterus suspended inside the abdominal cavity. There are at least 2 other round ligaments in the human body, the round ligament of the liver (ligamentum teres hepatis) and the round ligament of the head of the femur (ligamentum teres femoris). 926c046bf6 The exact symptoms associated with middle back pain will depend upon the underlying cause. Most middle back pain is not serious in nature. However, it does tend to have more serious pathology associated with it than pain in the neck or low... 926c046bf6 Serious and relatively common causes include acute coronary syndrome such as a heart attack (31%), pulmonary embolism (2%), pneumothorax, pericarditis (4%), aortic dissection (1%) and esophageal rupture. Other common causes include gastroesophageal reflux disease (30%), muscle or

skeletal pain (28%), pneumonia (2%), shingles (0.5%), pleuritis, traumatic and anxiety disorders. Determining the cause of chest pain is based on a person's medical history, a physical exam and other medical tests. About 3% of heart attacks, however, are initially missed. 926c046bf6 == Referral of pain == 926c046bf6 Precordial catch syndrome 926c046bf6 == See also == 926c046bf6 Defined anatomically, it is the area of the anterior chest wall over the heart. Referred pain An example is the case of angina pectoris brought on by a myocardial infarction (heart attack), where pain is often felt in the left side of the neck, left shoulder, and back rather than in the thorax (chest), the site of the injury. Referred pain has been described since the late 1880s. angina pectoris brought on by a myocardial infarction (heart attack), where pain is often felt in the left side of the neck, left shoulder, and back rather Referred pain, also called reflective pain, is pain perceived at a location other than the site of the painful stimulus. The International Association for the Study of Pain has not officially defined the term; hence, several authors have defined it differently. Despite an increasing amount of literature on the subject, the biological mechanism of referred pain is unknown, although there are several hypotheses 926c046bf6

Pain is the most common reason for physician consultation in most developed countries. It is a major symptom in many medical conditions, and can interfere with a person's quality of life and general functioning. People in pain experience impaired concentration, working memory, mental flexibility, problem-solving and information processing speed, and are more likely to experience irritability, depression, and anxiety. 926c046bf6

Pain in crustaceans Because of this complexity, the presence of pain in an animal, or another human for that matter, cannot be determined unambiguously using observational methods, but the conclusion that animals experience pain is often inferred on the basis of likely presence of phenomenal consciousness which is deduced from comparative brain physiology as well as physical and behavioural reactions. There is a scientific debate which questions whether crustaceans experience pain. It is a complex mental state, with a distinct perceptual quality but also associated with suffering, which is an emotional state. The division into four quadrants allows the localisation of pain and tenderness, scars, lumps, and other items of interest, narrowing in on which organs and tissues may be involved. These terms are not used in comparative anatomy, since most other animals do not stand erect 926c046bf6

The precordium is naturally a cardiac area of dullness. During examination of the chest, the percussion note will therefore be dull. In fact, this area only gives a resonant percussion note in hyperinflation, emphysema or tension pneumothorax. 926c046bf6 The left lower quadrant includes the left iliac fossa and half of the flank. The equivalent in other animals is left posterior quadrant. The left upper quadrant extends from the umbilical plane to the left ribcage. This is the left anterior quadrant in other animals. The right upper quadrant extends from umbilical plane to the right ribcage. The equivalent in other animals is right anterior quadrant. Most pain resolves once the noxious stimulus is removed and the body has healed, but it may persist despite removal of the stimulus and apparent healing of the body. Sometimes pain arises in the absence of any detectable stimulus, damage or disease. 926c046bf6

Chest pain Associated symptoms may include pain in the shoulder, arm, upper abdomen, or jaw, along with nausea, sweating, or shortness of breath. On physical examination, Chest pain is pain or discomfort in the chest, typically the front of the chest. Dyspnea and chest pain commonly occur during daily activities. It can be divided into heart-related and non-heart-related pain. Those with diabetes or the elderly may have less clear symptoms. It may be described as sharp, dull, pressure, heaviness or squeezing. Pain due to insufficient blood flow to the heart is also called angina pectoris. Syncope may also occur. outflow obstruction of the left ventricle 926c046bf6
