Stack Overflow features questions and answers on certain computer programming topics, and was created to be a more open alternative to earlier question-and-answer websites such as Experts-Exchange. The website was sold to Prosus, a Netherlands-based consumer-internet conglomerate, on 2 June 2021 for US\$1. Created in 2008 by Jeff Atwood and Joel Spolsky, it is the flagship site of the Stack Exchange network. 8 billion 602026b9ea

According to Danny Sullivan of SearchEngineWatch, Google Answers was not solid enough to compete against Yahoo! Answers. 602026b9ea Just like in the functional programming paradigm, mutating variables does not conform to the declarative paradigm because it implies an execution order which is imperative. 602026b9ea

The show was initially produced by Louis G. Cowan, Inc., who soon changed its name to Entertainment Productions in 1956 before the show ended. Cowan bought out the rights from Milton Biow, so just to develop the series. 602026b9ea
Declarative programming may consider programs as theories of a formal logic, and computations as deductions in that logical theory. Declarative programming at times simplifies the writing of parallel programs. 602026b9ea

Question Rhetorical questions, for instance, are interrogative in form but may not be considered bona fide questions, as they are not expected to be answered. Questions are sometimes distinguished from interrogatives, which are the grammatical forms, typically used to express them. polar questions are those such as the English example "Is this a polar question.", which can be answered with "yes" or "no". Heavenly Questions Of all the poems attributed to Qu Yuan, "Tianwen" contains more myths than any of the other pieces which may be attributed to him; however, due to the formal structure of "Tianwen" as a series of questions, information regarding the myths alluded to appear more as a series of allusive fragments than as cohesively narrated stories. The Heavenly Questions or Questions to Heaven (traditional Chinese: 天問; simplified Chinese: 天问; pinyin: Tiānwèn) is a piece contained in the Classical The Heavenly Questions or Questions to Heaven (traditional Chinese: 天問; simplified Chinese: 天问; pinyin: Tiānwèn) is a piece contained in the Classical Chinese poetry collection of Chu Ci, which is noted both in terms of poetry and as a source for information on the ancient culture of China, especially the area of the ancient state of Chu

According to legend, Qu Yuan wrote this series of questions in verse after viewing various scenes depicted on temple murals; specifically, it is said that following his exile from the royal court of Chu, Qu Yuan looked upon the depictions of the ancestors and the gods painted upon the walls of the ancestral temple of Chu; and, then, in response, wrote his questions to Heaven, upon these same walls.

Google Answers' predecessor was Google Questions and Answers, which was launched in June 2001. This service involved Google staffers answering questions by e-mail for a flat fee (US\$3.00). It was fully functional for about 24 hours, after which it was shut down, possibly due to excessive demand and the tough competition that Yahoo! set in place.

In the traditional game, the "answerer" chooses something that the other players, the "questioners", must guess. They take turns asking a question, which the answerer must answer with "yes" or "no". In variants of the game, answers such as "maybe" are allowed. Sample questions could be: "Is it bigger than a

breadbox?", "Is it alive?", and finally "Is it this pen?". Lying is not allowed. If a questioner guesses the correct answer, they win and become the answerer for the next round. If 20 questions are asked without a correct guess, then the answerer has stumped the questioners and gets to be the answerer for another round. 602026b9ea Common declarative language paradigms include logic programming (e.g., Prolog, Datalog... 602026b9ea

Contestants answered general knowledge questions, earning money which doubled as the questions became more difficult. The final question had a top prize of \$64,000 (equivalent to \$770,000 in 2025), hence the "\$64,000 Question" in the show's title 602026b9ea

Questions come in a number of varieties. For instance, polar questions are those such as the English example "Is this a polar question?", which can be answered with "yes" or "no". Alternative questions such as "Is this a polar question, or an alternative question?" present a list of possibilities to choose from. Open questions such as "What kind of question is this?" allow many possible resolutions. 602026b9ea and are read as declarative sentences in logical form: 602026b9ea

Logic programming A logic program is a set of sentences in logical form, representing knowledge about some problem domain. Logic programming is a programming, database, and knowledge representation paradigm based on formal logic. In all of these languages, rules are written in the form of clauses:. Computation is performed by applying logical reasoning to that knowledge, to solve problems in the domain. A logic program is a set of sentences in logical Logic programming is a programming, database, and knowledge representation paradigm based on formal logic. Major logic programming language families include Prolog, Answer Set Programming (ASP), and Datalog 602026b9ea

Questions are widely studied in linguistics and philosophy of language. In the subfield of pragmatics, questions are regarded as illocutionary acts which raise an issue to be resolved in discourse. In approaches to formal semantics such as alternative semantics or inquisitive semantics, questions are regarded as the denotations of interrogatives, and are typically identified as sets of the propositions which answer them. 602026b9ea == History == 602026b9ea As of June 2025, Stack Overflow... 602026b9ea In late November 2006, Google reported that it planned to permanently shut down the service (except for the Hong Kong and Arabic versions). No new questions were accepted after November 30, 2006, and no new answers were accepted after December 31, 2006. It was fully closed by late December 2006, although its archives remain available. 602026b9ea == What type of language is C++? == 602026b9ea Stack Overflow serves as a platform for users to ask and answer questions, and, through membership and active participation, to vote questions and answers up or down similar to Reddit and edit questions and answers in a fashion similar to a wiki. Users of the website can earn reputation points and "badges"; for example, a person is awarded 10 reputation points for receiving an "up" vote on a question or an answer to a question, and can receive badges for their valued contributions, which represents a gamification of the traditional Q&A website. Users unlock new privileges with an increase in reputation like the ability to vote, comment, and even edit other people's posts. 602026b9ea The principal designers of the C# programming language were Anders Hejlsberg, Scott Wiltamuth, and Peter Golde from Microsoft. It was first widely distributed in July 2000 and was later approved as an international standard by Ecma (ECMA-334) in 2002 and ISO/IEC (ISO/IEC 23270 and 20619) in 2003. Microsoft introduced C# along with .NET Framework and Microsoft Visual Studio, both of which are, technically speaking, closed-source. At the time, Microsoft had no open-source products. Four years later, in 2004, a free and open-source project called Mono began, providing a cross-platform compiler and runtime environment for the C# programming language. A decade later, Microsoft released Visual Studio Code (code editor), Roslyn (compiler), and the unified .NET platform (software framework), all of

which support C# and are free, open-source, and cross-platform. Mono also joined Microsoft, but was not merged...
602026b9ea Languages that permit this style allow a developer to minimize or eliminate side effects by describing what the program must accomplish in terms of the problem domain, rather than fully describing how to accomplish it as a sequence of the programming language primitives (the how being left up to the language's implementation). Declarative programming is in contrast with imperative programming, which implements algorithms in explicit steps. 602026b9ea C++ is a statically typed, free-form, multi-paradigm, compiled, general-purpose programming language. It is regarded as an intermediate-level language, as it comprises a combination of both high-level and low-level language features. It was developed by Bjarne Stroustrup starting in 1979 at Bell Labs as an enhancement to the C language. 602026b9ea
