

Process Chart Task 1

The focus of BPM is on representing the flow of actions or activities. Hermann J. Schmelzer and Wolfgang Sesselmann define it as "the cross-functional identification of value-adding activities that generate specific... c036cd77dc From a process perspective, an organisation regards its business as a system of vision-achieving vertical processes rather than specific activities and tasks of individual functions. The system is not a method or tool for a particular process, but a holistic approach to manage all of an organisation's processes. To manage processes effectively the organisation must have an effective team network and full knowledge of their vision. c036cd77dc Rational Software originally developed the RUP as a software process product. The product includes a hyperlinked knowledge-base with sample artifacts and detailed descriptions for many different types of activities. RUP is included in the Rational Method Composer (RMC) product which allows customization of the process. c036cd77dc A business process begins with a mission objective (an external event) and ends with achievement of the business objective of providing a result that provides customer value. Additionally, a process may be divided into subprocesses (process decomposition), the particular inner functions of the process. Business... c036cd77dc == Overview == c036cd77dc

Human processor model the specific task and method to accomplish that task For each final step identify sub-levels down to a basic process (in the diagram or chart below) Convert Human processor model or MHP (Model Human Processor) is a cognitive modeling method developed by Stuart K. Card, Thomas P. Other cognitive modeling methods include parallel design, GOMS, and keystroke-level model (KLM). Moran, & Allen Newell (1983) used to calculate how long it takes to perform a certain task c036cd77dc

According to the Association of Business Process Management Professionals (ABPMP), BPM is one of the five key disciplines within business process management, alongside process analysis, design, performance measurement, and transformation. c036cd77dc As an approach, BPM treats processes as important organizational assets that must be understood, managed, and continuously improved in order to create and deliver value to clients or customers. This approach closely resembles other total quality management or continual improvement process methodologies. c036cd77dc The typical Major League Baseball depth chart consists of a list of players at each position, with the starter or first-string player listed first, followed by replacement and platoon players. For fantasy baseball, typical preseason projection systems such as PECOTA construct depth charts that specify not just the order of the players at each position (starter, replacement or bench player) but also the amount of playing time each person at that position will have. For example, at first base one player may be projected as playing 60 percent of the innings, and another 40 percent for the coming season, while at catcher one player may be projected as playing 80 percent of the innings, and another 20 percent. For pitchers, the depth charts project the number of innings each roster player will pitch. c036cd77dc The human processor model uses the cognitive, perceptual, and motor processors along with the visual image, working memory, and long term memory storages. A diagram is shown below. Each processor has a cycle time and each memory has a... c036cd77dc Philippe Kruchten, an experienced Rational technical representative was tasked with heading up the original RUP team. c036cd77dc Informed stakeholders are updated as the project progresses. c036cd77dc Cognitive modeling is one way to evaluate the usability of a product. This method uses experimental times to calculate cognitive and motor processing time. The value of the human processor model is that it allows a system designer to predict the performance with respect to time it takes a person to complete a task without performing experiments. Other modeling methods include inspection methods, inquiry methods, prototyping methods, and testing methods. c036cd77dc

Rational unified process RUP is a specific implementation of the Unified Process. which allows customization of the process. Philippe Kruchten, an experienced Rational technical representative was tasked with heading up the original RUP The Rational Unified Process (RUP) is an iterative software development process framework created by the Rational Software Corporation, a division of IBM since 2003. RUP is not a single concrete prescriptive process, but rather an adaptable process framework, intended to be tailored by the development organizations and software project teams that will select the elements of the process that are appropriate for their needs c036cd77dc

Depth chart Depth charts also tend to resemble the actual position locations of certain players. includes developmental tasks such as those cited in books and articles related to the leadership pipeline subject. A depth chart analysis for key positioning In sports, a depth chart, primarily in the United States, is used to show the placements of the starting players and the secondary players. Generally a starting player will be listed first or on top while a back-up will be listed below c036cd77dc

Under the RACI framework: c036cd77dc The flowchart shows the steps as boxes of various kinds, and their order by connecting the boxes with arrows. This diagrammatic representation illustrates a solution model to a given problem. Flowcharts are used in analyzing, designing, documenting or managing a process or program in various fields. c036cd77dc

Business process management Processes can be structured and repeatable or unstructured and variable. Though not required, enabling technologies are often used with BPM. Any combination of methods used to manage a company's business processes is BPM. and/or technology. BPM streamlines business processing by automating workflows; while RPA automates tasks by recording a set of repetitive activities Business process management (BPM) is the discipline in which people use various methods to discover, model, analyze, measure, improve, optimize, and automate business processes c036cd77dc

ISO 9000:2015 promotes the process approach to managing an organization. c036cd77dc

Process-based management than specific activities and tasks of individual functions. The system is not a method or tool for a particular process, but a holistic approach to manage Process-based management is a management approach that views a business as a collection of processes, managed to achieve a desired result. A clear correlation between processes and vision supports the company in planning strategies, structuring business and using sufficient resources to achieve long-term success. Processes are managed and improved by the organisation for the purpose of achieving its vision, mission and core values c036cd77dc

== Overview == c036cd77dc Accountable stakeholders are held to be individually and ultimately responsible for the success or failure of the task; c036cd77dc The line system in ice hockey follows the same structure as a depth chart... c036cd77dc

Business process modeling business process modeling. Techniques to model business processes, such as the flow chart, functional flow block diagram, control flow diagram, Gantt chart, PERT Business process modeling (BPM) is the action of modeling processes of an enterprise. BPM is typically performed by business analysts in collaboration with subject matter experts. It is primarily used in business process management, software development, and systems engineering. BPM can also be automatically generated through IT systems, such as event logs and other data. BPM is used to analyze, improve, and possibly automate business processes c036cd77dc

The standard definition for MHP is: The MHP draws an analogy between the processing and storage areas of a computer, with the perceptual, motor, cognitive and memory areas of the computer user. c036cd77dc == History == c036cd77dc improving the effectiveness of a quality management system, to enhance customer satisfaction by meeting customer requirements. c036cd77dc Responsible stakeholders are involved in the planning, execution, and completion of the task; c036cd77dc BPM typically depends on process analysis to document current operations and on process design to define desired processes. c036cd77dc == Methodology == c036cd77dc ...promotes the adoption of a process approach when developing, implementing and c036cd77dc

Responsibility assignment matrix responsibility chart, is a project management technique that describes the responsibilities of various stakeholders in completing tasks or deliverables A responsibility assignment matrix, RACI matrix (responsible, accountable, consulted and informed matrix;) or linear responsibility chart, is a project management technique that describes the responsibilities of various stakeholders in completing tasks or deliverables. The matrix assigns one of four responsibilities to each stakeholder in executing a deliverable: Responsible, Accountable, Consulted, and Informed c036cd77dc

Business process Business processes occur at all organizational levels and may or may not be visible to the customers. Process-oriented organizations break down the barriers of structural departments and try to avoid functional silos. A business process, business method, or business function is a collection of related, structured activities or tasks performed by people or equipment A business process, business method, or business function is a collection of related, structured activities or tasks performed by people or equipment in which a specific sequence produces a service or product (that serves a particular business goal) for a particular customer or customers. The benefits of using business processes include improved customer satisfaction and improved agility for reacting to rapid market change. A business process may often be visualized (modeled) as a flowchart of a sequence of activities with interleaving decision points or as a process matrix of a sequence of activities with relevance rules based on data in the process c036cd77dc

BPM has many applications in business process management. There are multiple methods of modeling and notations that are recommended, BPMN being the most common. c036cd77dc

Flowchart A flowchart can also be defined as a diagrammatic representation of an algorithm, a step-by-step approach to solving a task. A flowchart can also be defined as a diagrammatic representation of an algorithm, a step-by-step approach to solving a task. The flowchart A flowchart is a type of diagram that represents a workflow or process. workflow or process c036cd77dc

== Overview == c036cd77dc From the bottom level of some activity box, the PDPC adds levels for: c036cd77dc

Process decision program chart Process diagrams and planning tree diagrams are extended by a couple of levels when the PDPC is applied to the bottom level tasks on those diagrams. The emphasis of the PDPC is to identify the consequential impact of failure on activity plans, and create appropriate contingency plans to limit risks. The emphasis of the PDPC is to identify the consequential Process Decision Program Chart (PDPC) is a technique designed to help prepare contingency plans. Process Decision Program Chart (PDPC) is a technique designed to help prepare contingency plans c036cd77dc

BPM proponents also claim that this approach can be supported, or enabled, through technology. Therefore, multiple BPM articles and scholars frequently discuss BPM from one of two viewpoints: people and/or technology... c036cd77dc Consulted stakeholders are sought for their opinions on a task; c036cd77dc The general management system focuses on specific work-knowledge and direct solutions for cost and budget; on the other hand, process based management applies these financial measurements but in an operational way considering how each performance affects the company as an amalgam of different processes. As a result of recent advances... c036cd77dc These initial versions combined the Rational Software organisation's extensive field experience building object-oriented systems (referred to by Rational field staff as the Rational Approach) with Objectory's guidance on practices such as use cases, and incorporated... c036cd77dc
