Word gap The term 30-million-word gap (often shortened to just word gap) was originally coined by Betty Hart and Todd R. Extrapolating, they stated that, "in four years, an average child in a professional family would accumulate experience with almost 45 million words, an average child in a working-class family 26 million words, and an average child in a welfare family 13 million words. They found that the average child in a professional family hears 2,153 words per waking hour, the average child in a working-class family hears 1,251 words per hour, and an average child in a welfare family only 616 words per hour. In their study of 42 Midwestern families, Hart and Risley physically recorded an hour's worth of language in each home once a month over 2½ years. Risley in their book *Meaningful Differences in the Everyday Experience of Young American Children*, and subsequently reprinted in the article "The Early Catastrophe: The 30 Million Word Gap by Age 3". Risley in their book *Meaningful Differences* The term 30-million-word gap (often shortened to just word gap) was originally coined by Betty Hart and Todd R. ". Word list A word list is compiled by lexical frequency analysis within a given text corpus, and is used in corpus linguistics to investigate genealogies and evolution of languages and texts. In pedagogy, word lists are used in curriculum design for vocabulary A word list is a list of words in a lexicon, generally sorted by frequency of occurrence (either by graded levels, or as a ranked list). Some major pitfalls are the corpus content, the corpus register, and the definition of "word". In pedagogy, word lists are used in curriculum design for vocabulary acquisition. Frequency lists are also made for lexicographical purposes, serving as a sort of checklist to ensure that common words are not left out. and texts. A lexicon sorted by frequency "provides a rational basis for making sure that learners get the best return for their vocabulary learning effort" (Nation 1997), but is mainly intended for course writers, not directly for learners. A word which appears only once in the corpus is called a hapax legomena. A word which appears only once in the corpus is called a hapax legomena. While word counting is a thousand years old, with still gigantic analysis done by hand in the mid-20th century, natural language electronic processing of large corpora such as movie subtitles (SUBTLEX megastudy) has accelerated the research field

Several of the earliest computers (and a few modern as well) use binary-coded decimal rather than plain binary, typically having a word size of 10 or 12 decimal digits, and some early decimal computers have no fixed word length at all. Early binary systems tended to use word lengths that were some multiple of 6-bits, with the 36-bit word being especially common...

The success of word-of-mouth marketing depends heavily on the nature of the loyalty rewards used. When companies utilize poor incentives to motivate consumers or agents to spread positive word of mouth about products or brands, the campaigns backfire.

The size of a word is reflected in many aspects of a computer's structure and operation; the majority of the registers in a processor are usually word-sized and the largest datum that can be transferred to and from the working memory in a single operation is a word in many (not all) architectures. The largest possible address size, used to designate a location in memory, is typically a hardware word (here, "hardware word" means the full-sized natural word of the processor, as opposed to any other definition used).
