

What Does Convenient Mean

Structured and formal plans, used by multiple people, are more likely to occur in projects, diplomacy, careers, economic development, military campaigns, combat, sports, games, or in the conduct of other business. In most cases, the absence of a well-laid plan can have adverse effects: for example, a non-robust project plan can cost the organization time and money. 5697d90035 A qualified majority... 5697d90035 == Versus majority == 5697d90035 w 5697d90035

Timekeeping on Mars but this is somewhat misleading: what distinguishes UTC from other forms of UT is its leap seconds, but MTC does not use any such scheme. MTC is more Though no standard exists, numerous calendars and other timekeeping approaches have been proposed for the planet Mars. The most commonly seen in the scientific literature denotes the time of year as the number of degrees on its orbit from the northward equinox, and increasingly there is use of numbering the Martian years beginning at the equinox that occurred April 11, 1955 5697d90035

The most popular ways to describe plans are by their breadth, time frame, and specificity; however, these planning classifications are not independent of one another. For instance, there is a close relationship between the short- and long-term categories and the strategic and operational categories. 5697d90035

Tropical year reaches a multiple of 360 degrees, the mean Sun crosses the vernal equinox and a new tropical year begins". The mean tropical year in 2000 was 365. 24219 A tropical year, or solar year (or tropical period), is the time that the Sun takes to return to the same position in the sky – as viewed from the Earth or another celestial body of the Solar System – thus completing a full cycle of astronomical seasons. For example, it is the time from vernal equinox to the next vernal equinox, or from summer solstice to the next summer solstice. It is the type of year used by tropical solar calendars 5697d90035

the period of time for the ecliptic longitude of the Sun to increase 360 degrees. Since the Sun's ecliptic longitude is measured with respect to the equinox, the tropical year comprises a... 5697d90035 To get a better idea of what it means to express a proposition, compare this to something that does not express... 5697d90035 == Overview == 5697d90035 == Definition == 5697d90035

Plurality (voting) as common as they now are, we may have occasion to find a convenient single word for what we used to call an absolute majority. In America the word A plurality vote (in North American English) or relative majority (in British English) describes the circumstance when a party, candidate, or proposition polls more votes than any other but does not receive a majority or more than half of all votes cast 5697d90035

Since antiquity, astronomers have progressively refined the definition of the tropical year. The entry for "year, tropical" in the Astronomical Almanac Online Glossary states: 5697d90035

Cognitivism (ethics) Cognitivism is so broad a thesis that it encompasses (among other views) moral realism (which claims that ethical sentences express propositions about mind-independent facts of the world), ethical subjectivism (which claims that ethical sentences express propositions about peoples' attitudes or opinions), and error theory (which claims that ethical sentences express propositions, but that they are all false, whatever their nature). a convenient usage, however, that a theory be called subjectivist if and only if, according to it, any ethical assertion implies that somebody does, or Cognitivism is the meta-ethical view that ethical sentences express propositions and can therefore be true or false (they are truth-apt), which noncognitivists deny 5697d90035

For example, if from 100 votes that were cast, 45 were for candidate A, 30 were for candidate B and 25 were for candidate C, then candidate A received a plurality of votes but not a majority. In some election contests, the winning candidate or proposition may need only a plurality, depending on the rules of the organization holding the vote. 5697d90035

Process performance index metric that does not account for process performance not exactly centered between the specification limits, and therefore is interpreted as what the process In process improvement efforts, the process performance index is an estimate of the process capability of a process during its initial set-up, before it has been brought into a state of statistical control 5697d90035

Oval , any An oval (from Latin ovum 'egg') is a closed curve in a plane which resembles the outline of an egg. , the set of points is finite) there is a more convenient characterization: For a finite projective plane of order n (i. In common English, the term is used in a broader sense: any shape which reminds one of an egg. The three-dimensional version of an oval is called an ovoid.), it is given a more precise definition, which may include either one or two axes of symmetry of an ellipse. e. For finite planes (i. e. The term is not very specific, but in some areas of mathematics (projective geometry, technical drawing, etc 5697d90035

Fitness (biology) relative fitnesses can be any nonnegative number, including 0. It is often convenient to choose one genotype as a reference and set its relative fitness to Fitness (often denoted 5697d90035

Plans can be formal or informal: 5697d90035 The term oval when used to describe curves in geometry is not well defined, except in the context of projective geometry. Many distinct curves are commonly called ovals or are said to have an "oval shape". Generally, to be called an oval, a plane curve should resemble the outline of an egg or an ellipse. In particular, these are common traits of ovals: 5697d90035 The basic meantone temperament employs flattened fifths with pure thirds. Unlike the perfect fifths in Pythagorean tuning, meantone tempers the intervals to be slightly smaller than their original 3:2 ratio of just intonation. The reduction of the fifth to a $4\sqrt{5}:1$ ratio enables justly tuned thirds in the 5:4 ratio. Because all of the meantone fifths are the same size, the system is classified... 5697d90035 Propositions are what meaningful declarative sentences (but not interrogative or imperative sentences) are supposed to express. Different sentences, in different languages, can express the same proposition: "snow is white" and "Schnee ist weiß" (in German) both express the proposition that snow is white. A common belief among philosophers who use this jargon is that propositions, properly speaking, are what are true or false (what bear truth values; they are truthbearers). 5697d90035

Sensu Conversely, where convenient, some authors derive expressions such as "sensu non strictissimo", meaning. sensu strictiore, or Plantae in sensu strictissimo

5697d90035

In international institutional law, a simple majority (also a plurality) is the largest number of votes cast (disregarding abstentions) among alternatives. In many jurisdictions, a simple majority is a stronger requirement than a plurality (yet weaker than an absolute majority) in that more votes than half cast, excluding abstentions, are required. 5697d90035 ^ 5697d90035 A meantone is equidistant from two other notes. Musical intervals are tempered when their tunings are altered. Meantone temperament is commonly defined as one in which a major third is divided by two equal whole tones. The two whole tones are sized as the geometric mean of 5:4, the major third's natural ratio derived from the harmonic series. 5697d90035 Formally, if the upper and lower specifications of the process are USL and LSL, the estimated mean of the process is 5697d90035 It is common for less formal plans to be created as abstract ideas, and remain in that form as they... 5697d90035 == Orbit of Mars == 5697d90035 Informal or ad hoc plans are created by individuals in all of their pursuits. 5697d90035 μ 5697d90035

Plan It is commonly understood as a temporal set of intended actions through which one expects to achieve a goal, and is sometimes represented by a diagram. Concepts such as top-down planning (as opposed to bottom-up A plan is typically any list of steps, with details of timing and resources, used to achieve an objective. or balance the society in order to have a functional, aesthetic, and convenient environment 5697d90035

For spatial or planar topologic or topographic sets see map. 5697d90035 An absolute majority (also a majority) is a number of votes "greater than the number of votes that possibly can be obtained at the same time for any other solution", when voting for multiple alternatives at a time 5697d90035 == Oval in geometry == 5697d90035

Meantone temperament The technique includes Meantone temperament is a musical tuning system. the intonation of thirds. The system derives its name from the geometric mean used to split the major third into two equal tones. Meantone temperament was in use as early as the 15th century, remained common into the 19th, and is still in limited use today. The system derives its name from the geometric mean used to split the major third into two equal tones. In meantone temperament the size of perfect fifths is reduced in order to improve the intonation of thirds. The technique includes a wide variety of tuning solutions 5697d90035

The tropical year is one type of astronomical year and a particular orbital period. Another type is the sidereal year (or sidereal orbital period), which is the time it takes Earth to complete one full orbit around the Sun as measured with respect to the fixed stars, resulting in a duration of 20 minutes and 24.7 seconds longer than the tropical year due to the precession of the equinoxes. 5697d90035
