Rectus capitis posterior minor muscle It is one of the suboccipital muscles. The rectus capitis posterior minor (or rectus capitis posticus minor[citation needed]) is a muscle in the upper back part of the neck. The muscle is innervated by the suboccipital nerve (the posterior ramus of first cervical spinal nerve). The muscle acts as a weak extensor of the head. It is one of the The rectus capitis posterior minor (or rectus capitis posticus minor) is a muscle in the upper back part of the neck. Its inferior attachment is at the posterior arch of atlas; its superior attachment is onto the occipital bone at and below the inferior nuchal line
