video with Kenneth ...  
2e45f995dc Have a standard  
search pattern. When I'm looking  
at a CTA of the head, I do the  
anterior circulation first and then  
move from right to left, then over  
to the posterior circulation.

Recognize the mimics. There are some things which can mimic aneurysmal subarachnoid hemorrhage, but some features may help you know that it is less likely to be from an aneurysm. Atypical location, an unusual history, or unusual patient demographics can clue you in that it might be a different cause. Be sure to think about hypertensive hemorrhage, venous infarct, tumor (glioma, metastasis, or cavernous malformation), and benign perimesencephalic hemorrhage.

The location of the blood on the non-contrast **CT**, is one ...

2e45f995dc Practice case #3

2e45f995dc Use reformats and 3-D imaging. These supplemental tools can help you improve your sensitivity. Multiplanar reformats are thin slices that are displayed in the other planes, while maximum intensity projections (or MIPs) show you the brightest pixel in a thicker slice. Volume renderings are a nice way to

make measurements and increase your sensitivity.

How do we find Brain Aneurysms? - How do we find Brain Aneurysms? 3 minutes, 4 seconds - This video discusses the **imaging**, tests doctors use to diagnose and find **brain aneurysms**. Different tests give neurosurgeons ...

What it Detects: Tumors, Stroke (Ischemic/Hemorrhagic), Infections

Radiation Risk: Is it safe?

Know the common aneurysm locations. The most common aneurysm location is the anterior communicating artery (35%) followed by the carotid terminus (30%) and middle cerebral artery (20%). Posterior circulation aneurysms are relatively uncommon (10%) but it's important to look there as well.

Try to use these tips on the sample case.
