Cannabinoid It is a primary psychoactive compound in Cannabis, capable of inducing the feeling of extreme euphoria and loss of memory. Minor cannabinoids, such as cannabinol (CBN) and cannabichromene (CBC), have not been shown to induce any intoxicating or psychotropic effects. At least 113 distinct phytocannabinoids have been isolated from cannabis, although only four (THCA, CBDA, CBCA, and their common precursor CBGA) have a confirmed biogenetic origin. Unlike THC, CBD is non-psychoactive and helps with anxiety and psychosis symptoms. Cannabinoids can be classified into two categories: major cannabinoids, which are present in high amounts in the Cannabis plant, and minor cannabinoids, which are present in smaller amounts in the Cannabis plant. Phytocannabinoids are also found in other plants, such as rhododendron, licorice, and liverwort.
