The emulsion, which had a strong fishy smell owing to its high cod liver oil content, was invented by Edward Lane, a chemist from Oamaru, in 1898. In 1908 the company opened a new factory in the town's Harbour Street (now part of the Oamaru Historic Precinct) in a building which still bears the product's slogan "It's famous because it's good". The original recipe contained cod liver oil, beechwood creosote, mineral lime, soda, brandy, vitamins, fresh egg yolk and some secret ingredients. Sold in clear glass bottles, the thick cream-coloured liquid was fed to generations of New Zealand children and was also sold overseas. A branch factory was opened in Melbourne in the 1920s. Originally claiming to be "a reliable remedy for pulmonary ailments", the product was still in production until 1984. Oamaru company Crombie and Price, which bought Lane's Medicine in 1971, still holds the rights and recipe to the product. == The diet == The benefits of cod liver oil had been known since the 1700s, with its first widespread usage for bone diseases around that time by Dr. Samuel Kay as referenced by the Manchester Infirmary. However, despite its value as a rich source of essential vitamins A & D for human nutrition, in its early days BCLO sold its greatest volume to the animal feed industry under simple descriptions such as Cod Oil, Pale Oil, Cattle Oil, Ruby Oil and Dark Cod Oil. Cod has been an important economic...

Alexander is best known for Arthritis and Common Sense, which sold more than one million copies. He was president of Witkower Press of Hartford, Connecticut, who published the book. He believed that drinking cod liver oil mixed with orange juice could cure arthritis. He appeared on The Johnny Carson Show and The Merv Griffin Show to promote his ideas. His ideas were uncritically accepted in the Los Angeles Times and on radio stations. == Description and production == Many fish maintain buoyancy with swim bladders. However sharks lack swim bladders, and maintain their buoyancy instead with large livers that are full of oil. This stored oil may also function as a nutrient when food is scarce. Deep sea sharks are usually targeted for their oil, because the livers of these species can account for up to 5-10% of their total weight. The claims made for the diet are unsubstantiated. According to the Swank diet web site, the diet consists of: The fish used as sources do not actually produce omega-3 fatty acids. Instead, the fish accumulate the acids by consuming either microalgae or prey fish that have accumulated omega-3 fatty acids. Fatty predatory fish, like sharks, swordfish, tilefish, and albacore tuna, may be high in omega-3 fatty acids, but due to their position at the top of the food chain, these species may also accumulate toxic substances through biomagnification. For this reason, the United States Environmental Protection Agency recommends limiting consumption (especially for women of childbearing age) of certain (predatory) fish species (e.g., albacore tuna, shark, king mackerel, tilefish and swordfish) due to high levels of the toxic contaminant... == Career == == Benefits == Historically, it was given to children in the United States in the 19th century as a patent medicine and by the end of the century was being praised by doctors in medical journals. After it was shown, in 1920, that vitamin D deficiency was the cause of rickets, cod liver oil was given as a rich source of vitamin D.

Shark liver oil Shark liver oil is an oil obtained from the livers of sharks. It is still promoted as a dietary supplement, and additional claims have been made that it can treat other maladies such as cancer, HIV, radiation sickness, swine flu, and the common cold. It has been used for centuries as a folk remedy to promote the healing of wounds and as a remedy for respiratory tract and digestive system problems. To date, none of these claims has been medically validated and shark liver oil (alone) is not a medication prescribed or utilized by American physicians. Atlantic cod are found in the colder waters and deeper sea regions throughout the Northern Atlantic. The Pacific cod is found in both eastern and western regions of the Pacific. Atlantic cod can grow to 2 metres (6.6 ft) in length. Its average weight is 5 to 12 kilograms (11 to 26 lb), but specimens weighing up to 100 kilograms (220 lb) have been recorded. Pacific cod are smaller, and may grow up to 49 centimetres (19 in) and weigh up to 15 kilograms (33 lb). Cod feed on mollusks, crabs, starfish, worms, squid, and small fish. Animal livers are rich in iron, vitamin A and vitamin B12; and cod liver oil is commonly used The liver is a major metabolic organ exclusively found in vertebrates which performs many essential biological functions, such as detoxification of the organism and the synthesis of various proteins and various other biochemicals necessary for digestion and growth. Its other metabolic roles include carbohydrate metabolism, the production of a number of hormones, conversion and storage of nutrients such as glucose and glycogen, and the decomposition of red blood cells 555176d8a6
