

Spinal Cord Cross Section Labeled

Inferior cerebellar peduncle Each inferior cerebellar peduncle connects the spinal cord and medulla oblongata with the cerebellum, and comprises the juxtarestiform, glossopharyngeal and vagus nerves

Substantia gelatinosa of Rolando It is a v-shaped, translucent. It forms the apex of the posterior grey column, one of three grey columns in the spinal cord. (horn), is a part of the spinal column

Brainstem posterior stalk-like part of the brain that connects the cerebrum with the spinal cord. In the human brain, the brainstem is composed of the midbrain, the pons

Lateral corticospinal tract corticospinal tract. It extends throughout the entire length of the spinal cord, and on transverse section appears as an oval area in front of the posterior column

Spinothalamic tract From the. This tract is an ascending sensory pathway to the thalamus. spinothalamic tract is a nerve tract in the anterolateral system in the spinal cord

Posterior thoracic nucleus It is located from the cervical segment C8 to lumbar segment L3 of the spinal cord and is an important structure. intermediate zone, of the spinal cord

Central nervous system part of the nervous system consisting primarily of the brain, and the spinal

cord. The retina is also technically part of the CNS. The CNS is named so 0e815cff1d

Grey matter Cross-section of spinal cord with the grey matter labelled. spinal cord in the centre (and grey matter labelled). Grey matter undergoes development and growth 0e815cff1d

Medullary pyramids (brainstem) caudal end, the corticospinal axons decussate (or cross over) the midline and continue down the spinal cord on the contralateral side. The fibers that decussated 0e815cff1d

Pyramidal tracts cerebral cortex and terminate either in the brainstem (corticobulbar) or spinal cord (corticospinal) and are involved in the control of motor functions of 0e815cff1d
