COVID-19 pandemic The World Health Organization (WHO) declared the outbreak a public health emergency of international concern (PHEIC) on 30 January 2020 and assessed it as having become a pandemic on 11 March. includes medication such as paracetamol or NSAIDs to relieve symptoms (fever, body aches, cough), adequate intake of oral fluids, and rest. Good personal The global COVID-19 pandemic (also known as the coronavirus pandemic), caused by severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2), began with an outbreak in Wuhan, China, in December 2019. The WHO declared that the public health emergency caused by COVID-19 had ended in May 2023, while noting that COVID-19 continued to be a global health threat. It spread to other parts of Asia and then worldwide in early 2020 0bfaeca74a

Nimesulide 13 September 2011, the Madras High Court revoked a suspension on manufacture and sale of paediatric drugs nimesulide and phenylpropanolamine (PPA). On Nimesulide is a nonsteroidal anti-inflammatory drug (NSAID) with pain medication and fever reducing properties. Its approved indications are the treatment of acute pain, the symptomatic treatment of osteoarthritis, and primary dysmenorrhoea in adolescents and adults above 12 years old Obfaeca74a

Nimesulide is not recommended long-term, as for chronic conditions such as arthritis. This is due to its association with an increased risk of liver toxicity, including liver failure. Despite its risk of hepatotoxicity, a 2012 evaluation by the European Medicines Agency (EMA) concluded that the overall benefit/risk profile of nimesulide is favourable and in line with that of the other NSAIDs such as diclofenac, ibuprofen, and naproxen provided that the duration of use is limited to 15 days and the dose does not exceed 200 mg/day. Obfaeca74a COVID-19 symptoms range from asymptomatic to deadly, but most commonly include fever, sore throat, nocturnal cough, and fatigue. Transmission of the virus is often through airborne particles. Mutations have produced many strains (variants) with varying degrees of infectivity and virulence. COVID-19 vaccines were developed rapidly and deployed to the general public beginning in December 2020, made available through government and international programmes such as COVAX, aiming to provide vaccine equity. Treatments include novel antiviral drugs and symptom control. Common mitigation...
