Pit latrine The total recurrent expenditure for more "upmarket" pit latrines has been estimated to be \$2. When properly built and maintained, pit latrines can decrease the spread of disease by reducing the amount of human feces in the environment from open defecation. 5-8. This decreases the transfer of pathogens between feces and food by flies. These pathogens are major causes of infectious diarrhea and intestinal worm infections. 5 for a VIP-type A pit latrine, also known as pit toilet, is a type of toilet that collects human waste in a hole in the ground. but does not include pit emptying costs. Urine and feces enter the pit through a drop hole in the floor, which might be connected to a toilet seat or squatting pan for user comfort. Infectious diarrhea resulted in about 700,000 deaths in children under five years old in 2011 and 250 million lost school days. Pit latrines can be built to function without water (dry toilet) or they can have a water seal (pour-flush pit latrine). Pit latrines are a low-cost method of separating feces from people f312c10621
