

Rantac 150 Side Effects

Ranitidine was discovered... In September 2019, the probable carcinogen N-nitrosodimethylamine (NDMA) was discovered in ranitidine products from a number of manufacturers, resulting in recalls. In April 2020, ranitidine was withdrawn from the United States market and suspended in the European Union and Australia due to these concerns. A reformulated ranitidine was approved in Australia in October 2024, and in the United States in November 2025.

Ranitidine Common side effects include headaches, and pain or burning sensation if given by injection. It is used in the treatment of peptic ulcer disease, gastroesophageal reflux disease, and Zollinger-Ellison syndrome. It can be given by mouth, injection into a muscle, or injection into a vein. Serious side effects may include cancer, liver Ranitidine, sold under the brand name Zantac among others, is a medication used to decrease stomach acid production

Common side effects include headaches, and pain or burning sensation if given by injection. Serious side effects may include cancer, liver problems, a slow heart rate, pneumonia, and the potential of masking stomach cancer. It is also linked to an increased risk of Clostridioides difficile colitis. Ranitidine is an H2 histamine receptor antagonist that works by blocking histamine, thus decreasing the amount of acid released by cells of the stomach.
