Conception usually occurs following vaginal intercourse, but can also occur through assisted reproductive technology procedures. A pregnancy may end in a live birth, a miscarriage, an induced abortion, or a stillbirth. Childbirth typically occurs around 40 weeks from the start of the last menstrual period (LMP), a span known as the gestational age; this is just over nine months. Counting by fertilization age, the length is about 38 weeks. Implantation occurs on average 8–9 days after fertilization. An embryo is the term for the developing offspring during the first seven weeks following implantation (i.e. ten weeks' gestational age), after which the term fetus is used until the birth of a baby.

Signs and symptoms of early pregnancy may include missed periods, tender breasts, morning sickness (nausea and vomiting), hunger, implantation bleeding, and frequent urination. Pregnancy may be confirmed with a pregnancy test. Methods of contraception are used to avoid pregnancy.

Doğukeppanochomolungmahokutotenkachōjō is a two month old account that is racking up thousands of semi-automated edits at a fairly shocking pace. An editor has complained on their talk page that they were

removing infobox parameters that could have been fixed, although I'm not sure on what scale they're making mistakes. Doğukeppanochohomolungmahokutotenkachōj o doesn't appear to be acting in bad faith, but I'm under the impression that this level of rapid semi-automated editing is enough for the user to be considered an unauthorized bot under WP:BOTPOL.
