

Should U Floss Or Brush First

Linear gingival erythema However, subsequent research revealed that LGE can also occur in HIV-negative immunocompromised patients, and it was thus renamed. It was initially believed to be directly associated with HIV infection, and was therefore termed HIV-associated gingivitis (HIV-G). Proper oral hygiene practices are important. Patients should be educated on proper brushing and flossing techniques to maintain periodontal health and prevent Linear gingival erythema (LGE) is a periodontal condition diagnosed by its distinct clinical presentation 1b17714b60

Linear gingival erythema (LGE), previously termed HIV-associated gingivitis, is a periodontal condition characterised by a distinct 2 to 3mm band of erythema along the free gingival margin. It often affects the anterior teeth initially, with subsequent progression to the posterior teeth. Although typically asymptomatic, some individuals may experience discomfort and bleeding upon probing. LGE is frequently observed in immunosuppressed individuals, such as those with HIV/AIDS, and is believed to result from subgingival colonisation by *Candida* species—particularly in patients with compromised neutrophil function. This condition can serve as an indicator of immunosuppression in affected individuals. 1b17714b60

Tooth brushing Interdental cleaning (with floss or an interdental brush) can Tooth brushing is the act of scrubbing teeth with a toothbrush equipped with toothpaste. Interdental cleaning (with floss or an interdental brush) can be useful with tooth brushing, and together these two activities are the primary means of cleaning teeth, one of the main aspects of oral hygiene. The recommended amount of time for tooth brushing is two minutes each time for two times a day. Tooth brushing is the act of scrubbing teeth with a toothbrush equipped with toothpaste 1b17714b60

== Definition and overview == 1b17714b60 In the manufacturing of food, pharmaceuticals, cosmetics, and other products, good hygiene is a critical... 1b17714b60 Humans, like most other mammals, are diphyodont, meaning that they develop two sets of teeth. The first set, deciduous teeth, also called "primary teeth", "baby teeth", or "milk teeth", normally eventually contains 20 teeth. Primary teeth typically start to appear ("erupt") around six months of age and this may be distracting and/or painful for the infant. However, some babies are

born with one or more visible teeth, known as neonatal teeth or "natal teeth". 1b17714b60 According to the World Health Organization (WHO), "Hygiene refers to conditions and practices that help to maintain health and prevent the spread of diseases." Personal hygiene refers to maintaining the body's cleanliness. Hygiene activities can be grouped into the following: home and everyday hygiene, personal hygiene, medical hygiene, sleep hygiene, and food hygiene. Home and every day hygiene includes hand washing, respiratory hygiene, food hygiene at home, hygiene in the kitchen, hygiene in the bathroom, laundry hygiene, and medical hygiene at home. 1b17714b60 The concerns of bad breath may be divided into genuine and non-genuine cases. Of those who have genuine bad breath, about 85% of cases come from inside the mouth. The remaining cases are believed to be due to disorders in the nose, sinuses, throat, lungs, esophagus, or stomach. Rarely, bad breath can be due to an underlying serious medical condition such as liver failure, ketoacidosis, or fecal vomiting. Non-genuine cases occur when someone complains of having bad breath, but other people cannot detect it. This is estimated to make up between 5% and 72% of cases. 1b17714b60 == Presentation == 1b17714b60 While often equated with cleanliness in common usage, hygiene is a term encompassing the personal practices and environmental conditions that maintain health and prevent disease. 1b17714b60 Since many common toothpaste ingredients are harmful if swallowed in large amounts, toothpaste should be spat out. Brushing teeth is most often done at a sink in a bathroom or kitchen, where the toothbrush is rinsed afterwards to remove any debris remaining and then dried to reduce conditions ideal for bacterial growth (and, if it is a wooden toothbrush, mold as well). 1b17714b60

Aggressive periodontitis floss). Smoking cessation (if applicable): Smoking Aggressive periodontitis describes a type of periodontal disease and includes two of the seven classifications of periodontitis as defined by the 1999 classification system:. involve going over both smooth surfaces (tooth brushing instructions) and the use of interproximal aids (e. g 1b17714b60

A total of four singles were released throughout July 2021. "Mr. Jones" featuring American rapper Future was released as the lead single the same day as the album. It peaked at number 71 on the US Billboard Hot 100 and number 70 on the Billboard Global... 1b17714b60 Hygiene is a practice related to lifestyle, cleanliness, health, and medicine. In medicine and everyday life, hygiene practices are preventive measures that reduce the incidence and spread of germs leading to disease. 1b17714b60 Localized aggressive periodontitis (LAP) 1b17714b60 The cause of cavities is acid from bacteria dissolving the hard tissues of the teeth (enamel, dentin, and cementum). The acid is produced by the bacteria when they break down food debris or sugar on

the tooth surface. Simple sugars in food are these bacteria's primary energy source, and thus a diet high in simple sugar is a risk factor. If tooth demineralization is greater than tooth remineralization from sources such as saliva, caries results. Risk factors include conditions that result in less saliva, such as diabetes mellitus, Sjögren syndrome, and some medications, including psychostimulants, antihistamines... 1b17714b60

Toothbrush It consists of a head of tightly clustered bristles, onto which toothpaste is applied, mounted on a handle that facilitates cleaning hard-to-reach areas of the mouth. They should be used in conjunction with tools that clean between the teeth—where toothbrush bristles cannot reach—such as floss, tape, interdental brushes or toothpicks. should be used in conjunction with tools that clean between the teeth—where toothbrush bristles cannot reach—such as floss, tape, interdental brushes A toothbrush is a special type of brush used to clean the teeth, gums, and tongue 1b17714b60

Faith (Pop Smoke album) The album's guest appearances include Kanye West, Pusha T, Rick Ross, The-Dream, 42 Dugg, 21 Savage, Rah Swish, Travi, Beam, The Neptunes, Bizzy Banks, Takeoff, Lil Tjay, Swae Lee, Future, Chris Brown, Dua Lipa, Pharrell, Kid Cudi, Quavo, and Kodak Black. It was posthumously released on July 16, 2021, by Victor Victor Worldwide and Republic Records. On July 30, six additional tracks were added, including the late rapper's hit single "Dior", from his breakout 2019 mixtape Meet the Woo. Faith is a drill, trap, and Faith is the second and final studio album by American rapper Pop Smoke. additional appearances from G Herbo, OnPointLikeOP, Killa, Dread Woo, Tayy Floss, Fetty Luciano, Anuel AA, and Obasi Jackson. The deluxe edition adds additional appearances from G Herbo, OnPointLikeOP, Killa, Dread Woo, Tayy Floss, Fetty Luciano, Anuel AA, and Obasi Jackson. Faith is a drill, trap, and hip hop record with elements of pop-trap, gospel, and pop. The deluxe edition of the album that includes four additional tracks was released on what would have been Pop Smoke's 22nd birthday, July 20, 2021 1b17714b60

Toothbrushes are available in different bristle textures, sizes, and forms. Most dentists recommend using soft-bristled toothbrushes, as harder ones may damage tooth enamel or irritate the gums. 1b17714b60

Hygiene not recommended to brush immediately after drinking acidic substances, including sparkling water. It is also recommended to floss once a day, with a different Hygiene is a set of practices performed to preserve

health 1b17714b60

In 1641, the first patent in North America was issued to Samuel Winslow by the General Court of Massachusetts for a new method of making salt. On April 10, 1790, President George Washington signed the Patent Act of 1790 (1 Stat. 109) into law proclaiming that patents were to be authorized for "any useful art, manufacture, engine, machine, or device, or any improvement therein not before known or used". On July 31, 1790, Samuel Hopkins of Pittsford, Vermont became the first person in the United States to file and to be granted a patent for... 1b17714b60 Therefore, the prevalence of LAP varies considerably between continents, and differences in race or ethnicity seem to be a major... 1b17714b60 Hygiene practices vary from one culture to another. 1b17714b60 The treatment depends on the underlying cause. Initial efforts may include tongue cleaning, mouthwash, and flossing. Tentative evidence supports the use of mouthwash containing chlorhexidine or cetylpyridinium chloride. While there is tentative evidence of benefit from the use of a tongue cleaner, it is insufficient to draw clear conclusions. Treating underlying disease such as gum disease... 1b17714b60 Clinically, LGE can be distinguished from other periodontal conditions due to its unique presentation. In... 1b17714b60 == Structure == 1b17714b60

Tooth decay , inflammation of the tissue around the tooth), tooth loss, infection, or dental abscess formation. Fluoride may be acquired from water, salt, or toothpaste Tooth decay, also known as caries (lit. exposure. Brushing one's teeth twice daily and flossing between the teeth once daily is recommended. e. Tooth regeneration is a field of ongoing stem cell-based study that aims to find methods to reverse the effects of decay; current treatments are limited to symptom management. 'rotteness', from Latin), is the breakdown of teeth due to acids produced by bacteria. Symptoms may include pain and difficulty eating. The resulting dental cavities may be many different colors, from yellow to black. Complications may include periodontal disease (i 1b17714b60

Some toothbrushes have plant-based handles, often made of bamboo. However, most are made of cheap plastic; such brushes constitute a significant source of pollution. Over 1 billion toothbrushes are discarded into landfills... 1b17714b60 == History == 1b17714b60

Human tooth As such, they are considered part of the human digestive system. Professional cleaning includes tooth scaling, using various instruments or devices to loosen and remove Human teeth function to mechanically break down items of food by cutting and crushing them in preparation for swallowing and

digesting. Teeth are made of multiple tissues of varying density and hardness. The incisors cut the food, the canines tear the food and the molars and premolars crush the food. Humans have four types of teeth: incisors, canines, premolars, and molars, which each have a specific function. The roots of teeth are embedded in the maxilla (upper jaw) or the mandible (lower jaw) and are covered by gums. develop even with careful brushing and flossing 1b17714b60

Generalized aggressive periodontitis (GAP) 1b17714b60

Timeline of United States inventions (before 1890) Copyright protection secures a person's right to his or her first-to-invent claim of the original invention in question, highlighted in Article I, Section 8, Clause 8 of the United States Constitution, which gives the following enumerated power to the United States Congress:. 1816 Milling The United States provided many inventions in the time from the Colonial Period to the Gilded Age, which were achieved by inventors who were either native-born or naturalized citizens of the United States. He had been recommending that people should clean their teeth with silk floss since 1815. credited with inventing the first form of dental floss 1b17714b60

LAP is localised to first molar or incisor interproximal attachment loss, whereas GAP is the interproximal attachment loss affecting at least three permanent teeth other than incisors and first molar. The prevalence of LAP is less than 1% and that of GAP is 0.13%. Approximately 0.1% of white Caucasians (with 0.1% in northern and in central Europe, 0.5% in southern Europe, and 0.1-0.2% in North America) and 2.6% of black Africans may have LAP. Estimates of the disease prevalence are 1-5% in the African population and in groups of African descent, 2.6% in African-Americans, 0.5-1.0% in Hispanics in North America, 0.3-2.0% in South America, and 0.2-1.0% in Asia. On the other hand, in Asia, the prevalence rate of 1.2% for LAP and 0.6% for GAP in Baghdad and Iran population, and 0.47% in Japanese population. 1b17714b60

Bad breath It is also associated with depression and symptoms of obsessive compulsive disorder. It can result in anxiety among those affected. Bad breath may also be persistent Bad breath, also known as halitosis, is a symptom in which a noticeably unpleasant breath odour is present. transient, often disappearing following eating, drinking, tooth brushing, flossing, or rinsing with specialized mouthwash 1b17714b60
