66ee54363e == Pulmonary aspiration == 66ee54363e Mason obtained journalism and marketing degrees at the University of Wollongong and in 2012 began her career at the Nine Network as an intern, shortly after which she was promoted to the sports department. 66ee54363e The stomach is located between the esophagus and the small intestine. The pyloric sphincter controls the passage of partially digested food (chyme) from the stomach into the duodenum, the first and shortest part of the small intestine, where peristalsis takes over to move this through the rest of the intestines. 66ee54363e The main hypothesized benefit of preoperative fasting is to prevent pulmonary aspiration of stomach contents while under the effects of general anesthesia. Aspiration of as little as 30–40 mL can be a significant cause of suffering and death during an operation and therefore fasting is performed to reduce the volume of stomach contents as much as possible. Several factors can predispose to aspiration of stomach contents including inadequate anesthesia, pregnancy, obesity, difficult airways, emergency surgery (since fasting time is reduced), full stomach and altered gastrointestinal mobility. Increased fasting times leads to decreased injury if aspiration occurs. 66ee54363e Treatment options include lifestyle changes, medications,... 66ee54363e

Stomach the colon. The Ancient Greek name for the stomach is gaster which is used as gastric in medical terms related to the stomach. shape of the stomach depends upon the degree of its distension and that of surrounding viscera, e. The stomach has a dilated structure and functions as a vital organ in the digestive system. g. The stomach is involved in the gastric phase of digestion, following the cephalic phase in which the sight and smell of food and the act of chewing are stimuli. When empty, the stomach is somewhat J-shaped; The stomach is a muscular, hollow organ in the upper gastrointestinal tract of humans and many other animals, including several invertebrates. In the stomach a chemical breakdown of food takes place by means of secreted digestive enzymes and gastric acid. It also plays a role in regulating gut microbiota, influencing digestion and overall health 66ee54363e

Risk factors include obesity, pregnancy, smoking, hiatal hernia, and taking certain medications. Medications that may cause or worsen the disease include benzodiazepines, calcium channel blockers, tricyclic antidepressants, NSAIDs,

and certain asthma medicines. Acid reflux is due to poor closure of the lower esophageal sphincter, which is at the junction between the stomach and the esophagus. Diagnosis among those who do not improve with simpler measures may involve gastroscopy, upper GI series, esophageal pH monitoring, or esophageal manometry. 66ee54363e

Preoperative fasting Delayed gastric emptying usually only affects the emptying of the stomach of high-cellulose foods such as vegetables. This is intended to prevent stomach contents from getting into the windpipe and lungs (known as a pulmonary aspiration) while the patient is under general anesthesia. Gastric emptying of clear fluids Preoperative fasting is the practice of a surgical patient abstaining from eating or drinking ("nothing by mouth") for some time before having an operation 66ee54363e
