Leopard 2 Developed by Krauss-Maffei in the 1970s, the tank entered service in 1979 and replaced. The Leopard 2 is a third

generation German main
battle tank (MBT)
ecfed0d8a7

According to Apple, Leopard contains over 300 changes and enhancements compared to its predecessor, Mac OS X Tiger, covering core operating system components as well as included applications and developer tools. Leopard introduces a significantly revised desktop, with a redesigned Dock, Stacks, a semitransparent menu bar, and an updated Finder that incorporates the Cover Flow visual navigation interface first seen in iTunes. Other notable features include support... ecfed0d8a7

Leopard Its body is slender and muscular, reaching a length of 92–183 cm (36–72 in) with a 66–102 cm (26–40 in) long tail and a shoulder height of 60–70 cm (24–28

in). The tiger diverged about 6.63 million years ago and the leopard about 4. It has a pale yellowish to dark golden fur with dark spots grouped in rosettes. 55 million years ago, followed by the snow leopard about 4. 9–72 kg (68–159 lb), and females 20.35 million The leopard (*Panthera pardus*) is one of the five extant cat species in the genus *Panthera*. Males typically weigh 30.5–43 kg (45–95 lb). *Panthera* lineage ecfed0d8a7

Felis fusca was the scientific name proposed by Friedrich Albrecht Anton Meyer in 1794 who described a black leopard from Bengal that was on display at the Tower of London. *Leopardus perniger* proposed by Brian Houghton Hodgson in 1863 were five leopard skins from Nepal, out of which three were black. He mentioned Sikkim and Nepal as habitat. ecfed0d8a7

It has a stocky build and weighs around 12 to 26 kg (26 to 57 lb). Its canine teeth are 2 in (5.1 cm) long, which, in proportion... ecfed0d8a7
The snow leopard was long classified in the monotypic genus *Uncia*. Since phylogenetic studies revealed the relationships among *Panthera* species, it has been considered a member of that genus. Two subspecies were described based on morphological differences, but genetic... ecfed0d8a7

Leopard 1 Kampfpanzer
Leopard, subsequently
Leopard 1 following the introduction of the successive Leopard 2, is a main battle tank designed by Porsche, and manufactured ecfed0d8a7

The leopard was first described in 1758, and several subspecies were

proposed in the 19th and 20th centuries. Today, eight subspecies are recognised in its wide range in Africa and Asia. It initially evolved in Africa during the Early Pleistocene, before migrating into Eurasia around the Early-Middle Pleistocene transition. Leopards were formerly present across Europe, but became extinct in the region at around the end of the Late Pleistocene-early Holocene. ecfed0d8a7

Indian leopard It is widely distributed on the Indian subcontinent. Indian leopards are not common in habitats where tiger density is high, and are wedged between prime tiger habitat on the one side, and The Indian leopard (*Panthera pardus fusca*) is a subspecies of the leopard (*P. pardus*). and 17 years. It is threatened by illegal trade of skins and body parts, and persecution

due to human-leopard
conflict and retaliation for
livestock depredation
ecfed0d8a7

The snow leopard is native to the mountain ranges of Asia, ranging from eastern Hindu Kush, the Himalayas and the Tibetan Plateau to southern Siberia, Mongolia and western China. It inhabits alpine and subalpine zones at elevations of 3,000–4,500 m (9,800–14,800 ft) featuring cliffs and ridges, but also lives at lower elevations in the northern part of its range. It is a solitary animal and is mostly active at dawn and twilight. It is a carnivore and actively hunts its prey, which include various ungulates and domestic livestock. ecfed0d8a7 Since leopard populations in Nepal, Sikkim and Kashmir are not geographically isolated from leopard populations in the Indian subcontinent, they

were subsumed to *P. p. fusca* in 1996. The Indus River in the west and the Himalayas in the north form topographical barriers to the dispersal of this subspecies. In the east, the Ganges Delta and the lower course...
ecfed0d8a7 *Panthera pardus millardi* proposed by Reginald Innes Pocock in 1930 was a single leopard skin and skull from Kashmir. It differed from typical *P. p. fusca* skins by longer hair and a more greyish colour.

Sunda clouded leopard On both Sunda Islands, it is threatened by deforestation. The Sunda clouded leopard (*Neofelis diardi*) is a medium-sized wild cat native to Borneo and Sumatra. It is listed as Vulnerable on the IUCN Red List since The Sunda clouded leopard (*Neofelis diardi*) is a medium-

sized wild cat native to Borneo and Sumatra. It is listed as Vulnerable on the IUCN Red List since 2015, as the total effective population probably consists of fewer than 10,000 mature individuals, with a decreasing population trend

African leopard It is widely distributed in most of sub-Saharan. The African leopard (*Panthera pardus pardus*) is the nominate subspecies of the leopard, native to Africa

Mac OS X Leopard Mac OS X Leopard is the last version of macOS that supports the PowerPC architecture as its successor, Mac OS X Snow Leopard, functions solely on Intel based Macs. Leopard was released on October 26, 2007, as the successor of Mac OS X Tiger, and is available in two editions: a desktop version suitable for

personal computers, and a server version, Mac OS X Server. 6) in 2009. According to Apple, Leopard contains over 300 changes and enhancements compared to its predecessor, Mac OS X Tiger, covering core operating system Mac OS X Leopard (version 10. It is also the first version of Mac OS X not to support the G3 family of PowerPC processors. It retailed for \$129 for the desktop version and \$499 for Server. Leopard was superseded by Mac OS X Snow Leopard (version 10. processors. 5) is the sixth major release of macOS, Apple's desktop and server operating system for Macintosh computers ecfed0d8a7

Tiger It is traditionally classified into nine subspecies, though some recognise only two subspecies, the mainland

Asian tiger and the Sunda Islands tiger. *Panthera* with the lion, leopard, jaguar and snow leopard. Results of genetic analyses indicate that the tiger and snow leopard are sister species whose The tiger (*Panthera tigris*) is a large cat and a member of the genus *Panthera* native to Asia. It has a powerful, muscular body with a large head and paws, a long tail and orange fur that fades to white in parts, with black, mostly vertical stripes

Leopard cat It has two dark stripes running from The leopard cat (*Prionailurus bengalensis*) is a small wild cat with dark spots on the tawny-coloured body and limbs. The leopard cat (*Prionailurus bengalensis*) is a small wild cat with dark spots on the tawny-coloured body and limbs. Its tail is about half the size of its

head-to-body length. It has two dark stripes running from the eyes to the ears and smaller white streaks running from the eyes to the nose, and two to four rows of elongated spots along its back

The Sunda clouded leopard is overall grayish yellow or gray hue. It has a double midline on the back and is marked with small irregular cloud-like patterns on shoulders. These cloud markings have frequent spots inside and form two or more rows that are arranged vertically from the back on the flanks. The leopard is adapted to a variety of habitats ranging from rainforest to steppe, including arid and montane areas. It is an opportunistic predator, hunting mostly ungulates and primates. It relies on its spotted pattern for camouflage as it stalks

and ambushes its prey, which it sometimes drags up a tree. It is a solitary... Throughout its range, it inhabits mainly forests, from coniferous and temperate broadleaf and mixed forests in the Russian Far East and Northeast China to tropical and subtropical moist broadleaf forests on the Indian subcontinent and Southeast Asia. The tiger is an apex predator and preys mainly on hooved mammals, which it takes by ambush. It lives a mostly solitary life and occupies home ranges, defending these from individuals of the same sex. The range of a male tiger overlaps with that of multiple females with whom he mates. Females give birth to usually two or three cubs that stay with their mother for about two years. When becoming independent, they leave their mother's home range and establish their

own. It was classified as a separate species, distinct from its close relative, the clouded leopard in mainland Southeast Asia based on a study in 2006. Its fur is darker with a smaller cloud pattern.

Snow leopard 7 to 2. Its small rounded ears, broad paws, and thick tails are adaptations for living in cold, mountainous environments. 82 million years ago. 62 to 1. Panthera originates most The snow leopard (*Panthera uncia*) is a felid species in the genus *Panthera*. The snow leopard and the tiger probably diverged between 3. Males are larger than the females, and both sexes have long canine teeth. estimated at 4. 7 million years ago. It has a thick whitish to grey fur with black spots on the head and neck, with larger rosettes on the

back, flanks and bushy tail
ecfed0d8a7

It can purr as its hyoid bone is ossified. Its pupils contract to vertical slits. ecfed0d8a7
The leopard cat is native to continental South, Southeast and East Asia. It inhabits tropical evergreen rainforests, subtropical deciduous and coniferous forests up to an elevation of 4,474 m (14,678 ft) in the Himalayas. Since 2002 it has been listed as Least Concern on the IUCN Red List as it is widely distributed although threatened by habitat loss and hunting in parts of its range. ecfed0d8a7
