Emperor: Naruhito 52e5a4390e Side effects may include vomiting, high blood sodium, or high blood potassium. If vomiting occurs, it is recommended that use be paused for 10 minutes and then gradually restarted. The recommended formulation includes sodium chloride, sodium citrate, potassium chloride, and glucose. Glucose may be replaced by sucrose and sodium citrate may be replaced by sodium bicarbonate, if not available, although the resulting mixture is not shelf stable in high-humidity environments. It works as glucose increases... 52e5a4390e Chief Justice of Japan: Naoto Ōtani 52e5a4390e Common side effects include upper respiratory tract infections (common cold, sinus infections), nausea, cough, and fever. 52e5a4390e

Not consuming enough folate can lead to folate deficiency within a few months. Otherwise, causes may include increased needs as with pregnancy, and in those with shortened red blood cell lifespan. Folate deficiency can be secondary to vitamin B12 deficiency or a defect in homocysteine methyl transferase that leads to a "folate trap" in which is an inactive metabolite that cannot be recovered. Diagnosis is typically confirmed by blood tests, including a complete blood count, and... 52e5a4390e

Crohn's disease Complications outside of the gastrointestinal tract may include anemia, skin rashes, arthritis, inflammation of the eye, and fatigue. per day, and may need to awaken at night to defecate. Symptoms often include abdominal pain, diarrhea, fever, abdominal distension, and weight loss. The skin rashes may be due to infections, as well as pyoderma gangrenosum or erythema nodosum. Visible bleeding in the feces is less common in Crohn's disease than in ulcerative colitis, but Crohn's disease (CD) is a type of inflammatory bowel disease (IBD) that may affect any segment of the gastrointestinal tract. Bowel obstruction may occur as a complication of chronic inflammation, and those with the disease are at much greater risk of colorectal cancer and small bowel cancer 52e5a4390e

Earliest known medication was done by Hemendra Nath Chatterjee in 1953 and he published it in The Lancet the results of using ORS to treat people with mild cholera. 52e5a4390e

Oral rehydration therapy Oral rehydration therapy can also be given by a nasogastric tube. It involves drinking water with modest amounts of sugar and salts, specifically sodium and potassium. Therapy can include the use of zinc supplements to reduce the

duration of diarrhea in infants and children under the age of 5. Dehydration may Oral rehydration therapy (ORT) is a type of fluid replacement used to prevent and treat dehydration, especially due to diarrhea. Use of oral rehydration therapy has been estimated to decrease the risk of death from diarrhea by up to 93%. diarrhea is corrected, the WHO recommends giving the child an extra meal each day for two weeks, and longer if the child is malnourished 52e5a4390e

Although the precise causes of Crohn's disease are unknown, it is believed to be caused by a combination of environmental, immune, and bacterial factors in genetically susceptible individuals. It results in a chronic inflammatory disorder, in which the body's immune system defends the gastrointestinal tract, possibly targeting microbial antigens. Although Crohn's is an immune-related disease, it does not seem to be an autoimmune disease (the immune system is not triggered by the body itself). The exact underlying immune problem is not clear, though it may be immunodeficiency.... 52e5a4390e

Isotretinoin Its isomer, tretinoin, is also an acne drug. Isotretinoin is used off-label to treat basal cell carcinoma and squamous cell carcinoma, although clinical evidence suggests it is not effective in this setting. The drug is associated with inflammatory bowel disease (IBD)—ulcerative colitis, but not Crohn's disease. There are also reports of people developing Isotretinoin, also known as 13-cis-retinoic acid and sold under the brand name Accutane among others, is a medication used to treat skin diseases like harlequin-type ichthyosis, lamellar ichthyosis, and severe cystic acne or moderate acne that is unresponsive to antibiotics. In its pure form, isotretinoin is an orange powder. It is a retinoid, meaning it is related to vitamin A, and is found in small quantities naturally in the body. pain 52e5a4390e

Folate deficiency 5-fluorouracil hydroxyurea trimethoprim Folate deficiency, also known as vitamin B9 deficiency, is a low level of folate and derivatives in the body. Symptoms may include fatigue, heart palpitations, shortness of breath, feeling faint, open sores on the tongue, loss of appetite, changes in the color of the skin or hair, irritability, and behavioral changes. also used to control inflammation associated with Crohn's disease, ulcerative colitis and rheumatoid arthritis. Folate deficiency anemia during pregnancy may give rise to the birth of low weight birth premature infants and infants with neural tube defects. Signs of folate deficiency are often subtle. Temporary reversible infertility may occur. This may result in megaloblastic anemia in which red blood cells become abnormally large, and folate deficiency anemia is the term given for this medical condition 52e5a4390e

Dietary fiber Dietary fiber consists of non-starch polysaccharides and other plant components, such as cellulose, resistant starch, resistant dextrins, inulins, lignins, chitins, pectins, beta-glucans, and oligosaccharides. Regularly consuming substantial dietary fiber is generally associated with supporting health and lowering the risks of several diseases. Dietary fiber has two main subtypes: soluble and insoluble. to relief

from inflammatory bowel disease, as in Crohn's disease, ulcerative colitis, and *Clostridioides difficile*, due in part to the short-chain fatty Dietary fiber (also spelled fibre), or roughage, is the portion of plant-derived food that cannot be completely broken down by human digestive enzymes. They are components of many foods from plants, such as legumes, whole grains, cereals, vegetables, fruits, nuts, and seeds. Dietary fibers are diverse in chemical composition and can be grouped generally by their solubility, viscosity and fermentability, which affect how fibers are processed in the body

The most common adverse effects are dry lips (cheilitis), dry and fragile skin (xeroderma), dry eyes and an increased susceptibility to sunburn. Uncommon and rare side effects include muscle aches and pains (myalgias), headaches, and depression in some users. Some of those side effects can persist long after the discontinuation of the use of the drug. Isotretinoin may cause liver failure, therefore the patient's blood levels should be regularly tested. It is known to cause birth defects due to in-utero exposure because of the molecule's close resemblance... Upadacitinib was approved for medical use in both the United States and the European Union in 2019. Speaker of the House of Representatives: Tadamori Ōshima == Medical uses == Weight loss typically occurs when fewer calories are consumed than is expended by daily activities, physiological processes and physical exercise (known as a caloric deficit). If enough weight is lost due to a reduction in body fat, an individual may move from being overweight (25.0-29.9) or obese (30+) into a healthy weight range (18.5-24.9); however, continued weight loss beyond this point can lead to becoming underweight (< 18.5). The first year was largely defined by COVID-19 pandemic that caused the national economy to go into recession, and would continue until October 1, 2021 (when the fourth state of emergency ends). In addition to various historical events, such as the postponement of Tokyo Olympics (until 2021) and with the end of Shinzo Abe era.

Weight loss "Unexplained" weight loss that is not caused by reduction in calorific intake or increase in exercise is called cachexia and may be a symptom of a serious medical condition. Weight loss can either occur unintentionally because of malnourishment or an underlying disease, or from a conscious effort to improve an actual or perceived overweight or obese state. peptic ulcer disease, inflammatory bowel disease (Crohn's disease and ulcerative colitis), pancreatitis, gastritis, diarrhea, chronic mesenteric ischemia and In medicine, health, or physical fitness, weight loss is a reduction of the total body mass, by a mean loss of fluid, body fat (adipose tissue), or lean mass (namely bone mineral deposits, muscle, tendon, and other connective tissue)

Food sources of dietary fiber have traditionally been divided according to proportion of soluble vs. insoluble fiber. The two types are defined according to their characteristics of viscosity and fermentability, with different advantages between the types. Plant foods contain both types in varying amounts. Bulking fibers, such as cellulose...

Upadacitinib Rinvoq, is a medication used for the treatment of rheumatoid arthritis, psoriatic arthritis, atopic dermatitis, ulcerative colitis, Crohn's disease, ankylosing Upadacitinib, sold under the brand name Rinvoq, is a medication used for the treatment of rheumatoid arthritis, psoriatic arthritis, atopic dermatitis, ulcerative colitis, Crohn's disease, ankylosing spondylitis, and axial spondyloarthritis. Upadacitinib is a Janus kinase (JAK) inhibitor that works by blocking the action of enzymes called Janus kinases. These enzymes are involved in setting up processes that lead to inflammation, and blocking their effect brings inflammation in the joints under control

Upadacitinib may be used as... 52e5a4390e During a total proctocolectomy, a surgeon removes a person's diseased colon, rectum, and anus. For the ileostomy, the end of the small intestine is brought to the surface of the body through an opening in the abdominal wall for waste to be removed. People with ileostomies wear an external bag, also known as an ostomy system or stoma appliance, to collect waste which can be emptied and changed as needed. 52e5a4390e Common autoimmune symptoms experienced by both sexes include rashes, fevers, fatigue, and joint pain. Symptoms which are specific to women include irregular menses, pelvic pain, or vaginal dryness, depending on the given disease. Some diseases such as Graves' disease, rheumatoid arthritis, and multiple sclerosis may improve during... 52e5a4390e President of the House of Councillors: Akiko Santō

Autoimmune disease in women In addition to gender, race and ethnicity can also play a role in prevalence rates. predominance. The reasons for these disparities are still under investigation, but may in part involve the presence of an additional X chromosome in women (given that several genes on the X chromosome are associated with immune system development), as well as the higher presence of female sex hormones such as estrogen (which increases immune system response). These conditions include inflammatory bowel disease (ulcerative colitis, Crohn's disease), immune thrombocytopenic purpura (ITP), and MOG Autoimmunity refers to a pathological immune response of the body's immune system against itself. Autoimmune disease is widely recognized to be significantly more common in women than in men, and often presents differently between the sexes. The risk, incidence, and character of autoimmune disease in women may also be associated with female-specific physiological changes, such as hormonal shifts during menses, pregnancy, and menopause 52e5a4390e

Ileo-anal pouch therapy for acute cuffitis due to retained rectal mucosal layer is usually similar to the treatment for ulcerative proctosis that ulcerative colitis patients In medicine, the ileal pouch-anal anastomosis (IPAA), also known as restorative proctocolectomy (RPC), ileal-anal reservoir (IAR), an ileo-anal pouch, ileal-anal pullthrough, or sometimes referred to as a J-pouch, S-pouch, W-pouch, or a pelvic pouch, is an anastomosis of a reservoir pouch made from ileum (small intestine) to the anus, bypassing the former site of the colon in cases where the colon and rectum have been removed. The pouch retains and restores functionality of the anus, with stools passed under voluntary control of the person, preventing fecal incontinence and serving as an alternative to a total proctocolectomy with ileostomy 52e5a4390e
