Tricyclic antidepressant The authors named the strategy Tricyclic antidepressants (TCAs) are a class of medications that are used primarily as antidepressants. They are named after their chemical structure, which contains three rings of atoms. TCAs were discovered in the early 1950s and were marketed later in the decade. Tetracyclic antidepressants (TeCAs), which contain four rings of atoms, are a closely related group of antidepressant compounds. replacement of the two-atom bridge between the aromatic systems with an azo group and (2) opening of the central ring
