9975add5b2 Determining Magnetic Field Direction 9975add5b2 Showing the magnetic field has no radial component. We assume a radial component of magnetic field for the solenoid, but then we derive a contradiction: reversing the direction of current in the solenoid must reverse the direction of magnetic field. But reversing the direction of current is no different than picking up the solenoid and flipping it over! There's no way that picking a solenoid up and rotating it could cause an outward magnetic field component to reverse to inward, therefore the radial component of magnetic field must be zero.

: https ... 9975add5b2 Showing the magnetic field has no circumferential component. We draw a circumferential Amperian loop centered on the symmetry axis, and show that any circumferential component of the magnetic field must vanish when we apply Ampere's Law. 9975add5b2 Vectors 9975add5b2 Playback 9975add5b2 Solenoid Valve 9975add5b2 Intro 9975add5b2 Introduction: given a solenoid of radius R carrying a current of I with linear turn density n turns per length, we use Ampere's law to derive the magnetic field inside and outside the solenoid. We only have to make one assumption to proceed with the calculation of field for a long solenoid: the magnetic field vanishes at a large distance from the symmetry axis! 9975add5b2 Finding the direction of magnetic field inside and outside the solenoid. Now that we know the magnetic field is parallel to the solenoid axis, we show a cross section of the solenoid and use the right hand rule to infer the direction of magnetic field inside and outside the solenoid. 9975add5b2 Subtitles and closed captions 9975add5b2 General 9975add5b2 What is a Solenoid? 9975add5b2 Solenoid Magnetic Field - Solenoid Magnetic Field 10 minutes, 11 seconds - This video defines an ideal **solenoid**, as a single, very long, current-carrying, insulated wire wrapped to form a hollow cylinder,
