The Star Wars universe showcases a diversity of vehicle types, many of which utilize fictitious technology. One of these, the repulsorlift, is an anti-gravity device that pushes against a planet's gravity to create lift. Vehicles which use repulsorlifts to hover and fly are known as 'repulsorcraft' or 'speeders' with further classifications including airspeeders, landspeeders, snowspeeders and speeder bikes. Traditional methods of locomotion like wheels and tracked treads still see use however as they are typically more durable and require less energy to operate. The Mexican economy has maintained macroeconomic stability, reducing inflation and interest rates to record lows. What does anyone else think? Ritchie333 (talk) (cont) 18:20, 12 July 2013 (UTC) bda4f49fb6 Within economic progressivism, there is some ideological variation. Illustrative examples of this include some Christian democracy and conservative-leaning communitarian movements. While many ideologies can fall under the banner of progressivism, all eras of the movement are characterized by a critique of unregulated capitalism and a call for a more active democratic government to safeguard human rights, promote cultural development, and serve as a check-and-balance on corporate monopolies. bda4f49fb6 If you are engaged in this work you will probably find quite a number of unreferenced articles... bda4f49fb6 == Vehicles appearing in the Original Trilogy == bda4f49fb6 Support Sounds sensible to me, but I would urge an explanatory edit summary. National broadband plan For instance, low round trip delay (or "latency" in milliseconds) would normally be assumed to be well under 150ms and suitable for Voice over IP, online gaming, international financial transactions, virtual private networks and other latency-sensitive applications. (IFT). Suitability for certain applications, or technically a certain quality of service, is often assumed. Broadband is a term normally considered to be synonymous with a high-speed connection to the internet. In some applications, utility-grade reliability (measured for example in seconds per 30 years outage time as in the PSTN network) or security (say AES-128 as required for smart grid applications in the US) are often also assumed or defined as requirements. This would rule out satellite Internet as inherently high-latency. COFETEL, now IFT, went from being A national broadband plan is a national plan to deploy broadband Internet access.
