

What Is Cropping Pattern

Although obscure natural causes or alien origins of crop circles are suggested by fringe theorists, there is no scientific evidence for such explanations, and all crop circles are consistent with human causation. In 1991, two hoaxers, Doug Bower and Dave Chorley, took credit for having created over 200 crop circles throughout England in widely-reported interviews. The number of reports of crop circles increased substantially after interviews with them. In the United Kingdom, reported circles are not distributed randomly across the landscape, but appear near roads, areas of medium to dense population, and cultural heritage monuments, such as Stonehenge or Avebury. They usually appear overnight. Nearly half of all crop circles found in the UK in 2003 were located within a 15 km (9.3 mi) radius of the Avebury stone circles. 3e04d3ca8b

Crop Crops have been central to human civilization since the first agricultural revolution, a key stage in the broader history of agriculture, when early societies domesticated plants for food and trade. Today, a small number of staple crops such as rice, wheat, maize, and sugarcane account for the majority of global production. various methods of cropping that are used, and each method of cropping has advantages and disadvantages. Because of their economic importance, crops are studied within several scientific disciplines, including agronomy, agricultural science, horticulture, and forestry. Monoculture: growing one crop species in a field A crop is a plant or plant product harvested for human use. Crops are cultivated at scale to produce food, fiber, fuel, and other products 3e04d3ca8b

Changing rainfall patterns since the 1970s in Rift Valley, Kenya The rainfall patterns in Rift Valley, Kenya, have changed over. in Rift Valley to combat the decrease in crop yield due to changing rainfall patterns 3e04d3ca8b

Philips circle pattern The Philips circle pattern (also referred to as the Philips pattern or PTV Circle pattern) refers to a family of related electronically generated complex The Philips circle pattern (also referred to as the Philips pattern or PTV Circle pattern) refers to a family of related electronically generated complex television station colour test cards. The content and layout of the original colour circle pattern was designed by Danish engineer Finn Hendil (1939–2011) in the Philips TV & Test Equipment laboratory in Amager (moved to Brøndby Municipality in 1989) near Copenhagen under supervision of chief engineer Erik Helmer Nielsen in 1966–67, largely building on their previous work with the monochrome PM5540 pattern. The first piece of equipment, the PM5544 colour pattern generator, which generates the pattern, was made by Finn Hendil and his group in 1968–69. The same team would also develop the Spanish TVE colour test card in 1973 3e04d3ca8b

Crop circle The term was coined in the early 1980s. Crop circles have been described as all falling "within the range of the sort of thing done in hoaxes" by Taner Edis, professor of physics at Truman State University. crop circle, crop formation, or corn circle is a pattern created by flattening a crop, usually a cereal. Crop A crop circle, crop formation, or corn circle is a pattern created by flattening a crop, usually a cereal. The term was coined in the early 1980s 3e04d3ca8b

Cropmark She said that some features do not produce crop marks and that some crop marks, when excavated, turn out not to be what they. on crop mark evidence alone 3e04d3ca8b

Cover crop Cover crops may be an off-season crop planted after harvesting the cash crop. Cover crops reduce water pollution risks and remove CO₂ from the atmosphere. design and manage a crop that will produce a healthy environment for quite some time. Cover crops manage soil erosion, soil fertility, soil quality, water, weeds, pests, diseases, biodiversity and wildlife in an agroecosystem—an ecological system managed and shaped by humans. Cover crops can increase microbial activity in the soil, which has a positive effect on nitrogen availability, nitrogen uptake in target crops, and crop yields. Cover crops are nurse crops in that they increase the survival of the main crop being harvested, and are often grown over the winter. Recent syntheses indicate that cover cropping generally improves In agriculture, cover crops are plants that are planted to cover the soil rather than for the purpose of being harvested 3e04d3ca8b

Since the widespread introduction of the original PM5544 from the early-1970s, the Philips Pattern has become one of the most commonly used test cards, with only the SMPTE and EBU colour bars as well as the BBC's Test Card F coming close to its usage. 3e04d3ca8b

Crop scouting number, cropping history, including specific variety and seed manufacturer, planting date, planting rate (spacing), row width, tillage operations, crop yields 3e04d3ca8b
