

Area Of A Semicircle

Salinon radius of large enclosing semicircle, and r_2 is the radius of the small central semicircle, then the area of the salinon is: $A = 1$

The earliest known reference to this figure is in Archimedes's Book of Lemmas, where some of its mathematical properties are stated as Propositions 4 through 8. The word arbelos is Greek for 'shoemaker's knife'. The figure is closely related to the Pappus chain.

Arbelos an arbelos is a plane region bounded by three semicircles with three apexes such that each corner of each semicircle is shared with one of the others (connected) In geometry, an arbelos is a plane region bounded by three semicircles with three apexes such that each corner of each semicircle is shared with one of the others (connected), all on the same side of a straight line (the baseline) that contains their diameters

== Arithmetic and geometric means ==

Semicircle It only has one line of symmetry (reflection symmetry). It is a circular arc that measures 180° (equivalently, π radians, or a half-turn) In mathematics (and more specifically geometry), a semicircle is a one-dimensional locus of points that forms half of a circle. a semicircle is a one-dimensional locus of points that forms half of a circle. It is a circular arc that measures 180° (equivalently, π radians, or a half-turn)

Two of the semicircles are necessarily concave, with arbitrary diameters a and b ; the third semicircle is convex, with diameter $a+b$. Let the diameters of the smaller semicircles be BA and AC ; then the diameter of the larger semicircle is BC . Massachusetts was originally divided into two numbering plan areas, when AT&T published the configuration of the first nationwide telephone numbering plan for Operator Toll Dialing in 1947. Area code 617 was assigned to the eastern two-thirds of Massachusetts from roughly the western end of Worcester County to Boston, The Cape and Islands, and the South Coast, while the western part received area code 413.

Archimedes' quadruplets According to Proposition 5 of Archimedes' Book of Lemmas, the outer semicircle. The other two quadruplet circles are formed in a symmetric way from the semicircle with radius r_2

Area of a circle πr^2 Note that the area of a semicircle of radius r can be computed by the integral $\int_{-r}^r \sqrt{r^2 - x^2} dx$

In non-technical usage, the term "semicircle" is sometimes used to refer to either a closed curve that also includes the diameter segment from one end of the arc to the other or to the half-disk, which is a two-dimensional geometric region that further includes all the interior points.

Book of Lemmas Then shall the area of the figure bounded by the circumferences of all. centre of the first semicircle, meet the opposite semicircles in C , F respectively

== Properties ==

Pomacanthus semicirculatus as the semicircled angelfish, Koran angelfish, blue angelfish, zebra angelfish or half-circled angelfish, is a species of ray-finned fish, a marine angelfish

Twin circles determined by three collinear points A , B , and C , and is the curvilinear triangular region between the three semicircles that have AB , BC , and AC as their diameters

Area codes 508 and 774 part received area code 413. state of Massachusetts. It includes Worcester, Outer south and southwest Greater Boston (such as the MetroWest region), as well as Framingham, Foxborough, Brockton, Attleboro, Taunton, Dartmouth, Fall River, New Bedford, Plymouth, Cape Cod, Martha's Vineyard, and Nantucket. Area code 508 was activated for service on July 16, 1988, in an area code split of 617, with a semicircle around Boston retaining Area codes 508 and 774 are telephone area codes in the North American Numbering Plan (NANP) for the U. S. The numbering plan area comprises south-central and most of southeastern Massachusetts (LATA 128)

All lines intersecting the semicircle perpendicularly are concurrent at the center of the circle containing the given semicircle. == History == Area code 508 was activated for service on July 16, 1988, in an area code split of 617, with a semicircle around Boston retaining 617 and the central offices in the northern, western, and southern parts of the area being reassigned to area code 508. Permissive dialing of 617 and 508 continued until... By Thales' theorem, any triangle inscribed in a semicircle with a vertex at each of the endpoints of the semicircle and the third vertex elsewhere on the semicircle is a right triangle, with a right angle at the third vertex.

Lune of Hippocrates of a right triangle, whose outer boundaries are semicircles and whose inner boundaries are formed by the circumcircle of the triangle, then the areas
