Social Accounting is different from public interest accounting as well as from critical accounting. This 21st century definition contrasts with the 20th century meaning of social accounting in the sense of accounting for the national income, gross product and wealth of a nation or region 5a2c0b002b

Social accounting is commonly used in the context of business, or corporate social responsibility (CSR), although any organisation, including NGOs, charities, and government agencies may engage in social accounting. Corporate sustainability Firms will often express their commitment to corporate sustainability through a statement of Corporate Sustainability Standards (CSS), which are usually policies and measures that aim to meet, or exceed, minimum regulatory requirements. Corporate sustainability is often confused with corporate social responsibility (CSR), though the two are not the same. Corporate sustainability is an approach aiming to create long-term stakeholder value through the implementation of a business strategy that focuses on the ethical, social, environmental, cultural, and economic dimensions of doing business. The strategies created are intended to foster longevity, transparency, and proper employee development within business organizations

Corporate sustainability is often confused with corporate social responsibility (CSR), though the two are not the same. Bansal and Desjardine (2014) state that the notion of 'time' discriminates sustainability from CSR and other similar concepts. Whereas ethics, morality, and norms permeate CSR, sustainability only obliges businesses to make intertemporal trade-offs to safeguard intergenerational equity. Short-termism is the bane of sustainability.

While CSR often takes the form of a philanthropic, activist, or charitable nature by supporting volunteering through pro bono programs, community development, and by administering monetary grants to non-profit organizations for the public benefit, corporations have been seen shifting to a holistic and strategic approach. Strategic CSR is a long-term approach to creating a net positive social impact based on brand alignment, stakeholder integration, and ethical behaviour. Moreover, some scholars and firms are using the term "creating shared value", an extension of CSR which allows for social obligations to be met while the company reaps a profit. The term ESG first came to prominence in a 2004 report titled "Who Cares Wins", which was a joint initiative of financial institutions at the invitation of the United Nations (UN). By 2023, the ESG movement had grown from a UN corporate social responsibility initiative into a global phenomenon representing more than US\$30 trillion in assets under management.

CSE is a multi-disciplinary scientific sub-field relating to the fields of corporate social responsibility and sustainability. It has relevance in the context of business and management, specifically in areas such as business ethics, sustainability, organizational behavior, entrepreneurship, human resource management and business strategy. The concept has intersections with sociology, anthropology, social psychology and philosophy. Criticisms of ESG vary depending on viewpoint and area of focus. These areas include data quality and a lack of standardization; evolving regulation and politics; greenwashing; and variety in

the definition and assessment of social good. Some critics argue that ESG serves as a de facto extension of governmental regulation, with large investment firms like BlackRock...
