In 2022, the US Food and Drug Administration (FDA) approved the combination dextromethorphan/bupropion to serve as a rapid-acting antidepressant in people with major depressive disorder 037a12f293

When exceeding approved dosages, dextromethorphan acts as a dissociative hallucinogen. It has multiple mechanisms of action, including actions as a nonselective serotonin-norepinephrine reuptake inhibitor and a sigma-1 receptor agonist. Dextromethorphan and its major metabolite dextrorphan also block the NMDA receptor at high doses, producing effects similar to those of other dissociative anesthetics such as ketamine, nitrous oxide, and phencyclidine. 037a12f293

Pseudoephedrine Side effects of pseudoephedrine include insomnia, elevated heart rate, increase in Pseudoephedrine is a sympathomimetic medication which is used as a nasal decongestant to treat nasal congestion. At higher doses, pseudoephedrine acts as a psychostimulant, appetite suppressant, and performance-enhancing drug; as a result, non-medicinal use of pseudoephedrine is common, and it is often considered an abused drug. It also has many off-label uses, such as treatment of hypotension (low blood pressure). The medication is administered orally. Pseudoephedrine is sold under many brand names, Sudafed being among the most common. is sold under many brand names, Sudafed being among the most common 037a12f293

== Medical uses == 037a12f293 It is in the morphinan class of medications with dissociative and stimulant properties (at lower doses). Dextromethorphan does not have a significant affinity for the mu-opioid receptor activity typical of morphinan compounds and exerts its therapeutic effects through several other receptors. In its pure form, dextromethorphan occurs as a white powder. 037a12f293 Guaifenesin has been used medically since at least 1933. It is available as a generic medication and over-the-counter (OTC). In 2023, it was the 291st most commonly prescribed medication in the United States, with more than 500,000 prescriptions. In 2023, the combination dextromethorphan/guaifenesin was the 315th most commonly prescribed medication in the United States, with more than 200,000 prescriptions. 037a12f293 Side effects of pseudoephedrine include insomnia, elevated heart rate, increase in blood pressure, Psychomotor agitation and restlessness, dizziness, anxiety, and dry mouth. Rarely, pseudoephedrine has been associated with serious cardiovascular complications like heart attack and hemorrhagic stroke. Some people are more sensitive to its cardiovascular effects than others. Pseudoephedrine acts as a norepinephrine releasing agent, indirectly activating adrenergic receptors. As such, it is an indirectly acting

sympathomimetic. Pseudoephedrine significantly crosses the blood-brain barrier, but has some peripheral selectivity due to its hydrophilicity.... 037a12f293 Side effects may include dizziness, sleepiness, skin rash, and nausea. While it has not been properly studied in pregnancy, it appears to be safe. 037a12f293

Guaifenesin Guaifenesin, also known as glyceryl guaiacolate, sold under the brand name Mucinex, among others, is an expectorant medication taken by mouth and marketed Guaifenesin, also known as glyceryl guaiacolate, sold under the brand name Mucinex, among others, is an expectorant medication taken by mouth and marketed as an aid to eliminate sputum from the respiratory tract. It may be used in combination with other medications. Chemically, it is an ether of guaiacol and glycerine. In 2023, it was alleged to work by making airway secretions more liquid. A 2014 study found that guaifenesin does not affect sputum volume in upper respiratory infections (the upper respiratory system includes most breathing parts above the lungs) 037a12f293
