Jemdet Nasr excavators. Some of these tablets may actually have come from the 1928 excavations under Watelin. The site was first excavated in 1926 by Stephen Langdon, who found Proto-Cuneiform clay tablets in a large mudbrick building thought to be the ancient administrative centre of the site. It is adjacent to the much larger Neo-Babylonian and Sassanian site of Tell Barguthiat (also Tell Bargouthiat) to the northeast. 3100–2900 BC), under an alternate periodization system termed the Uruk III period, and was one of the oldest Sumerian cities. The tablets from the regular excavations are stored in Jemdet Nasr (Arabic: **جمدة نصر**) (also Jamdat Nasr and Jemdat Nasr) is a tell or settlement mound in Babil Governorate, Iraq that is best known as the eponymous type site for the Jemdet Nasr period (c 25e1c809c9

Tablets based on System B, associated with Kidinnu Kidinnu (also Kidunnu; possibly fl. have been used contemporaneously, and tablets for both systems have been found in both Babylon and Uruk. Strabo of Amaseia called him Kidenas, Pliny the Elder called him Cidenas, and Vettius Valens called him Kidynas 25e1c809c9

== History == 25e1c809c9 A second season took place in 1928, but this season was very poorly recorded. Subsequent excavations in the 1980s under British archaeologist Roger Matthews were, among other things, undertaken to relocate the building excavated by Langdon. These excavations have shown that the site was also occupied during the Ubaid, Uruk and Early Dynastic I periods. Based on texts found there mentioning an ensi of NI.RU that is thought to be its ancient name. During ancient times the city was on a canal linking it to other major Sumerian centers. 25e1c809c9 Untreated water may contain potentially pathogenic agents, including protozoa, bacteria, viruses, and some larvae of higher-order parasites such as liver flukes and roundworms. Alcohol withdrawal syndrome 25e1c809c9 Phenazepam is used in the treatment of various mental disorders such schizophrenia and anxiety. It can be used as a premedication before surgery as it augments the effects of anesthetics. In 2009, phenazepam has gained popularity as a recreational drug; misuse has been reported in the United Kingdom, Finland, Sweden, and the United States. 25e1c809c9 Usually, a course of treatment with phenazepam should not normally exceed 2 weeks (in some cases therapy may be prolonged for up to 2 months) due to the risk of drug abuse and dependence. To prevent withdrawal syndrome, it is necessary to reduce the dose gradually. 25e1c809c9 Some may find certain Maalox medications, such as Maalox Multi-Action, to be a successful anti-diarrhea treatment due to the aluminum hydroxide content, which in normal situations has a tendency to result in constipation. Maalox may also be used to treat nausea and stomach cramps associated with dyspepsia, diarrhea, or constipation. 25e1c809c9

== Medical uses == 25e1c809c9 The Third Dynasty of Ur is commonly abbreviated as "Ur III" by historians studying the period. It is numbered in reference to previous "dynasties" of Ur according to the historical reconstruction of the Mesopotamian past written in the Sumerian King List, such as the First Dynasty of Ur (26–25th century BC), but it seems the once supposed Second Dynasty of Ur was never recorded. 25e1c809c9 These units provide an autonomous supply of drinking water to people without access to clean water supply services, including inhabitants of developing countries and disaster areas, military personnel, campers, hikers, and workers in

Often these are used in combination. 25e1c809c9 It arose from the token-based system that had already been in use across the region in preceding millennia. Other precursors of this system include clay bullae containing tokens, and numerical tablets using only numeral signs. Those devices were used in the institutions of Mesopotamia and western Iran during the 4th millennium BC, in order to record administrative operations. The proto-cuneiform subsequently appeared in southern Mesopotamia, during the 34th century BC. This system is documented by around 5,000 clay tablets coming from various sites, dating from c. 3350–3000BC. 25e1c809c9 This invention is related to the increasingly complex administrative practices, itself a consequence of the formation of more complex social and political entities, considered to be the first cities and states. Those evolutions are especially visible at Uruk, the site where most of the proto-cuneiform texts were found. 25e1c809c9 == Drinking water hazards == 25e1c809c9 == History == 25e1c809c9 == History == 25e1c809c9 The acronym 'MAALOX' refers to the solution's compositional elements: magnesium and aluminum as oxides. Marad The cylinder was not excavated but rather found by locals so its provenance was not certain, as to some extent was the site's identification as Marad. Tell Wana is actually a small mound 1 kilometer from Tell as-Sadoum. Marad was situated on the west bank of the then western branch of the Upper Euphrates River west of Nippur in modern-day Iraq and roughly 50 km southeast of Kish, on the Arahtu River. inscribed objects were found including 21 cuneiform tablets, mainly from the Isin-Larsa and Old Babylonian periods but a few from Neo-Babylonian times, primarily Marad (Sumerian: Marda, modern Tell Wannat es-Sadum or Tell as-Sadoum (also Wana-Sedoum), Iraq) was an ancient Near Eastern city. The site was identified in 1912 based on a Neo-Babylonian inscription on a truncated cylinder of Nebuchadrezzar noting the restoration of the temple. Brief reactive psychosis and hypochondriasis-senestopathic syndrome 25e1c809c9 The Greek geographer Strabo of Amaseia, in Geography 16.1.6, writes: "In Babylon a settlement is set apart for the local philosophers, the Chaldeans, as they are called, who are concerned mostly with astronomy; but some of these, who are not approved of by the others, profess to be writers of horoscopes. (There is also a tribe of the Chaldeans, and a territory inhabited by them, in the neighborhood of the Arabs and of the Persian Gulf, as it is called.) There are also several tribes of the Chaldean astronomers. For example, some are called Orcheni [those from Uruk], others Borsippeni [those from Borsippa], and several others by different names, as though divided into different sects which hold to various dogmas about the same subjects. The Xuanhe Calligraphy Manual (宣和書譜) credits Wang Cizhong with creating the regular script, based on the clerical script of the early Han dynasty (202 BCE – 220 CE). It became popular during the Eastern Han and Three Kingdoms periods, with Zhong Yao (c. 151 – 230), a calligrapher in the state of Cao Wei (220–266), being credited as its first master, known as the father of regular script. His famous works include the Xuanshi biao (宣示表), Jianjizhi biao (建極志), and Liming biao (臨明表). Palaeographer Qiu Xigui describes the script in Xuanshi biao as: 25e1c809c9 This kingdom was founded by Ur-Namma (c. 2112–2094 BC), who succeeded in reuniting southern Mesopotamia a few decades after the fall of the Empire of Akkad. His son and successor Shulgi (c. 2094–2047 BC) then firmly held the heart of the kingdom, a very prosperous agricultural and urban region, where a very advanced economic administration was established, based on the temple domains controlled by the royal power. Under his reign, military campaigns expanded further the influence of Ur, creating an "Empire." Shulgi's successors managed... 25e1c809c9 Muscle spasticity 25e1c809c9
