

Avery Full House Code V0 35 4

The Veil Nebula in Cygnus comprises several NGC/IC items: 6960 (the Witch's Broom), 6992/6995/IC1340 (Eastern Veil), 6974 (faint patch near north boundary) -- and the one I'm asking about: NGC 6979. This is frequently associated with Pickering's Triangle (see, e.g. Astronomy magazine, or indeed Google search for Pickering+triangle+"NGC+6979"), but the coords usually given for 6979 (and displayed in Uranometria) appear to be closer to 6974 -- and Pickering's Triangle was reputedly discovered only photographically, in the early 1900s. So the question is: is NGC 6979 really Pickering's Triangle, and is there a clear, definitive reference for the identity? -- Elphion (talk) 01:43, 1 December 2010 (UTC) b8329e2263 The 2006 wikitext editor will be officially removed next week, on the normal deployment train (i.e., Thursday, 25 October 2018 for the English Wikipedia). This has been discussed since at least 2011, was planned for at least three different months in 2017, and is finally happening. b8329e2263

Wikipedia:Reference desk/Archives/Science/2010 December 1 The math: $P=IV$, of which IV_0 is light (V_0 is approximately the minimum voltage to get light) and the rest heat, so $P = \text{December 1} = \text{. little sturdier, but also useless}$ b8329e2263

I should add, our own article on the Veil Nebula -- the one I've been working on -- is not yet "definitive" :-)) -- Elphion (talk) 01:46, 1 December 2010 (UTC) b8329e2263
