equal angles. Square tilings are ubiquitous in tiled floors and walls, graph paper, In geometry, a square is a regular quadrilateral. As with all rectangles, a square's angles are right angles (90 degrees, or $\pi/2$ radians), making adjacent sides perpendicular. Squares are special cases of rectangles, which have four equal angles, and of rhombuses, which have four equal sides. The area of a square is the side length multiplied by itself, and so in algebra, multiplying a number by itself is called squaring.
