Rotator cuff tendinopathy is, by far, the most common reason people seek care for shoulder pain. Pain related to rotator cuff tendinopathy is typically on the front side of the shoulder, down to the elbow, and worse reaching up or back. Diagnosis is based on symptoms and examination.

Medical imaging is used mostly to plan surgery and is not needed for diagnosis. c7c2f5ed98 The son of NBA player Joe Bryant and his wife Pam, he was born in Philadelphia and spent part of his childhood in Italy. Bryant played high school basketball at Lower Merion High School outside of Philadelphia. He opted out of college basketball and declared for the 1996 NBA draft. He was selected by the Charlotte Hornets with the 13th pick; he was then traded to the Lakers. Following his rookie season, he earned NBA All-Rookie Second Team honors and won the 1997 Slam Dunk Contest. He was named an All-Star in his second season. He had a feud with teammate Shaquille O'Neal that was well-documented. Nevertheless, the pair led the Lakers to three consecutive NBA championships from 2000 to 2002. In 2003, Bryant was charged...

c7c2f5ed98 The type of sports injury suffered varies greatly based on gender, age and sport. Nonetheless, those with the highest prevalence remain contusions, fractures and sprains, followed closely by wounds and overuse injuries. Also common, the possible severity of head and neck injuries are important to consider. It is also paramount to place emphasis on the specific injuries that are most commonly encountered by sports medicine specialists. c7c2f5ed98 Treatment may include pain medication, such as NSAIDs and specific exercises. It is recommended that people who are unable to raise their arm above 90 degrees after two weeks should be further assessed. Surgery may be offered for acute ruptures and large attritional defects with good quality muscle. The benefits of surgery for smaller defects are unclear as of 2019. A 2025 study concluded that arthroscopic subacromial decompression offered no benefit after ten years of follow-up over placebo surgery (diagnostic arthroscopy) or exercise in people with symptoms consistent with subacromial pain syndrome for more than three months...
