Potassium It is a silvery white metal that is soft enough to easily cut with a knife. It was first isolated from potash, the ashes of plants, from which its name derives. In nature, potassium occurs only in ionic salts. 5 millimoles (mmol) [or milliequivalents (mEq)] per liter by multiple Potassium is a chemical element; it has symbol K (from Neo-Latin kalium) and atomic number 19. between meals to maintain potassium levels. In the periodic table, potassium is one of the alkali metals, all of which have a single valence electron in the outer electron shell, which is easily removed to create an ion with a positive charge (which combines with anions to form salts). Plasma potassium is normally kept at 3. Potassium metal reacts rapidly with atmospheric oxygen to form flaky white potassium peroxide in only seconds of exposure. It is found dissolved in seawater (which is 0. 5 to 5. Elemental potassium reacts vigorously with water, generating sufficient heat to ignite hydrogen emitted in the reaction, and burning with a lilac-colored flame. 04% potassium by weight), and occurs in many minerals such as orthoclase, a common constituent of granites and other igneous rocks 24af702418

The condition is classified as an inherited metabolic disorder. CAH is an autosomal recessive condition since it results from inheriting two copies of the faulty CYP21A2 gene responsible for 21-hydroxylase enzyme deficiency. The most common forms of CAH are: classical form, usually diagnosed at birth, and nonclassical, late onset form, typically diagnosed during childhood or adolescence, although it can also be identified in adulthood when seeking medical help for fertility concerns or other related issues, such as PCOS or menstrual irregularities. Carriers for the alleles of the nonclassical forms may have no symptoms, such form of CAH is sometimes called cryptic form. Congenital adrenal hyperplasia due to 21-hydroxylase deficiency in all its forms accounts for over 95% of diagnosed cases of all types of congenital adrenal hyperplasia. Unless another specific enzyme is mentioned, CAH in most contexts refers to 21-hydroxylase deficiency. CAH is one of the most common autosomal recessive genetic diseases in humans. 24af702418 Potassium is chemically very similar to sodium, the previous element in group 1 of the periodic table. They have a similar first ionization energy, which allows for each atom to give up its sole... 24af702418 == Function == 24af702418

Transcription factor Jun c-Jun, in combination with protein c-Fos, forms the AP-1 early response transcription factor. c-jun was the first oncogenic transcription factor discovered.

1007/s001090050077. S2CID 2693522. This gene is intronless and is mapped to 1p32-p31, a chromosomal region involved in both translocations and deletions in human malignancies. Liu JL, Kung HJ (2001). The viral homolog v-jun was discovered in avian sarcoma virus 17 and was named for ju-nana, the Japanese word for 17. It was first identified as the Fos-binding protein p39 and only later rediscovered as the product of the JUN gene. The human JUN encodes a protein that is highly similar to the viral protein, which interacts directly with specific target DNA sequences to regulate gene expression. doi:10. PMID 8974016. "Marek's disease herpesvirus transforming protein MEQ: a c-Jun analogue Transcription factor Jun, also known as c-Jun, is a protein that in humans is encoded by the JUN gene. The proto-oncogene c-Jun is the cellular homolog of the viral oncoprotein v-jun (P05411). 725-47 24af702418

Wikipedia:Reference desk/Archives/Science/2010 February 5 approximately your daily K needs by iv feeding, we would give you about 2 meq per kg per day. The reason your pills have so little is that almost no one = February 5 = 24af702418

Due to... 24af702418

Congenital adrenal hyperplasia due to 21-hydroxylase deficiency These infants may also

experience severe hyperkalemia with potassium (K+) levels exceeding 10 mEq/L, along with Congenital adrenal hyperplasia due to 21-hydroxylase deficiency (CAH) is a genetic disorder characterized by impaired production of cortisol in the adrenal glands. 105 and 125 mEq/L Na+ in serum samples 24af702418
