

# What Test Shows Kidney Function

Kidney transplantation is important to regularly monitor the new kidney's function by measuring serum creatinine and other tests; these should be done at least every three months

**Chronic kidney disease** Chronic kidney disease (CKD) is a type of long-term kidney disease, defined by the sustained presence of abnormal kidney function and/or abnormal kidney structure

**Urine test strip** One of the kidney's important functions is to. strips show colours that change from orange at pH 5, passing through yellow and green to dark blue at pH 9

**Acute kidney injury** Acute kidney injury (AKI), previously called acute renal failure, is a sudden decrease in kidney function that develops within seven days, as shown by

**Kidney failure** products from the blood, functioning at less than 15% of normal levels. Kidney failure is classified as either acute kidney failure, which develops rapidly

**Kidney ischemia** which results in poor blood flow in the kidneys. More complications happen when failure of the kidney functions result in toxicity in various parts of

**Kidney of kidney disease**; recent infections; exposure to substances toxic to the kidney; and family history of kidney disease. Kidney function is tested by using

**Polycystic kidney disease** Cysts are non-functioning

tubules filled with. cysts within the kidney. These cysts may begin to develop in utero, in infancy, childhood, or in adulthood 60e221f762

Autosomal dominant polycystic kidney disease polycystic kidney disease (ADPKD) is one of the most common, life-threatening inherited human disorders and the most common hereditary kidney disease. It 60e221f762

Kidney stone disease The diagnosis is usually based on symptoms, urine testing, and medical imaging. Blood tests. kidney when minerals in urine are at high concentrations 60e221f762
