

Cold And Cough Tablet Name

Selecting a product should depend on the specific symptom presentation of the user. Products should be selected with active ingredients limited only to those symptoms, thereby reducing the risk of over treatment with medications that the user is not showing symptoms for. Additionally, careful note should be taken when purchasing multiple over-the-counter cold and flu medicines because many products may contain the same active ingredient. The potential for overdose increases when consumers are unaware of the duplication of active ingredients in these medicines.
