

How Long Do Rats Live

The naked mole-rat exhibits a highly unusual set of physiological and behavioural traits that allow it to thrive in a harsh underground environment, most notably its being the only mammalian thermoconformer with an almost entirely ectothermic (cold-blooded) form of body temperature regulation, as well as exhibiting eusociality, a complex social structure including a reproductive division of labour, separation of reproductive and non-reproductive castes, and cooperative care of young. The closely related Damaraland mole-rat (*Fukomys damarensis*) is the only other known eusocial mammal. Naked mole-rats lack pain sensitivity in their skin, and have very low metabolic and respiratory rates. The animal is also remarkable for its longevity and resistance to cancer and oxygen deprivation. 179de1931d

== Species and description == 179de1931d The concert is one of the longest live performances by the Doors. Among the 25 songs played that night, the group played eight blues standards such as "Back Door Man", Junior Parker's "Mystery Train" and "Crossroads" by Robert Johnson. The band were joined by Lovin' Spoonful's John Sebastian on guitar and harmonica on the L.A. Woman track "Been Down So Long," "Love Hides", Chuck Berry's "Carol", Muddy Waters' "Close to You," and Slim Harpo's "I'm a King Bee." The concert was originally scheduled to end before midnight but ran on until one in the morning. This late end, against union rules, saw the band being banned from the Cobo Arena. 179de1931d In 1966, Stapleton's brother, John, arranged for the group to play at a club in Queens, New York (The John Doe Room) where a record company executive heard them and eventually signed the band, but suggested a name change was in order. The band continued to play top 40 covers while working on their own original music. 179de1931d "Rats" is one of two songs by Davies on Lola vs Powerman, the other being

"Strangers". It contrasts heavily with some of the other tracks on the album, featuring heavy guitar chords and fast-paced vocals. "Rats" marks an end somewhat to Dave Davies' contributions to Kinks albums, as ones preceding Lola versus Powerman and beginning with Kinda Kinks usually included one or two songs credited to Davies. 179de1931d Domesticated... 179de1931d The HeroRATs and HeroDOGS at APOPO are used for humanitarian tasks, specifically detecting landmines, tuberculosis, and conducting search and rescue. The HeroRATs and HeroDOGS can be used in complementary roles to increase efficiency in the field. The HeroRATs usually work in cleared open areas where they can be easily monitored, while the HeroDOGS can work in areas with thick, overgrown vegetation that are harder for rats to navigate. Both rats and dogs use clicker training, a reward-based system that ensures high motivation by reinforcing successful detection with treats. Throughout their careers and into their retirement, they receive excellent care, veterinary support, and specialized handling to ensure their well-being. This introduction section points out how APOPO uses the unique HeroRATs and HeroDOGS... 179de1931d

Rat Rats belong to the same subfamily as mice and are often distinguished based on their size. Usually the common name of a large muroid rodent will include the word "rat", while a smaller muroid's name will include "mouse". Like mice, they are known to invade properties for food, water, warmth, and shelter. Other rat genera include Neotoma (pack rats), Bandicota (bandicoot rats) and Dipodomys (kangaroo rats). Fancy rat intelligent than other domesticated rodents. Healthy fancy rats typically live 2 to 3 years. The name fancy rat derives from the use of the adjective fancy for a hobby, also seen in "animal fancy", a hobby involving the appreciation, promotion, or breeding of pet or domestic animals. The offspring of wild-caught brown rats, having become docile after having been bred for many generations, fall under the fancy type. Fancy rats were originally targets for blood sport in 18th- and 19th-century Europe. Later bred as pets, they now come in a wide variety of coat colors and patterns, and are bred and raised by several rat enthusiast groups around the world. They are sold by breeders and in pet stores, and they are also often available at animal shelters. 179de1931d
