A high-pass filter (HPF) is an electronic filter that passes signals with a frequency higher than a certain cutoff frequency and attenuates signals with frequencies lower than the cutoff frequency. Hence, this case corresponds to a high-pass filter with a very wide stopband. A high-pass filter is usually modeled as a linear time-invariant system. High-pass filters have many uses, such as blocking DC from circuitry sensitive to non-zero average voltages or radio frequency devices. a high corner frequency of the filter. The amount of attenuation for each frequency depends on the filter design. They can also be used in conjunction with a low-pass filter to produce a band-pass filter. e 2c1e9d959c
