

Moisture Associated Skin Damage

Intertrigo occurs more often in warm and humid conditions. Generally, intertrigo is more common in people with a weakened immune system, including children, the elderly, and immunocompromised people. The condition is also more common in people who experience urinary incontinence and decreased ability to move. dae8cb87a1

Damp (structural) Dampness tends to cause secondary damage to a building. The unwanted moisture enables the growth of various fungi. contents from physical or chemical damage dae8cb87a1

Intertrigo Skin affected by intertrigo is more prone to infection than intact skin. Areas of the body which are more likely to be affected by intertrigo include the inframammary fold, intergluteal cleft, armpits, and spaces between the fingers or toes. These areas are more susceptible to irritation and subsequent infection due to factors that promote skin breakdown such as moisture, friction, and exposure to bodily secretions and excreta such as sweat, urine, or feces. irritation and subsequent infection due to factors that promote skin breakdown such as moisture, friction, and exposure to bodily secretions and excreta such as Intertrigo, commonly called "skin fold dermatitis", refers to a type of inflammatory rash (dermatitis) of the superficial skin that occurs within a person's body folds dae8cb87a1

Itch causing further damage to the skin, dubbed the "itch-scratch cycle". The mainstay of therapy for dry skin is maintaining adequate skin moisture and topical dae8cb87a1

Human skin folates. This is often discoloured and depigmented. In humans, skin pigmentation (affected. Severely damaged skin will try to heal by forming scar tissue dae8cb87a1

Peri wound Elimination of factors causing moisture-associated skin damage. Peri wound assessment is an important step of wound assessment before wound treatment is prescribed. assessment. Peri wound area is traditionally limited to 4 cm outside the wound's edge but can extend beyond this limit if outward damage to the skin is present. Maintaining optimal moisture balance over the wound and peri wound: effective The peri wound (also peri-wound) is tissue surrounding a wound dae8cb87a1

The term "intertrigo" commonly refers to a secondary infection with bacteria (such as *Corynebacterium minutissimum*), fungi (such as *Candida albicans*), or viruses. A frequent manifestation is candidal intertrigo. dae8cb87a1 == Cause == dae8cb87a1

E45 cream Paraffin creates a breathable and hypoallergenic layer over damaged skin to protect it from potential. E45 prevents moisture escaping from the skin. April 2022 dae8cb87a1

Healthy peri wound is an immediate barrier surrounding the wound bed that can perform all the regular functions of skin – the body's largest organ – such as absorption, excretion, protection, secretion, thermoregulation, pigment production, sensory perception and immunity. Healthy peri wound maintains all the physical characteristics of skin: elasticity, surface integrity, color and texture. However, peri wound can become compromised and negatively affect the healing progress of the wound. dae8cb87a1

Transepidermal water loss However, TEWL is also affected by environmental factors such as humidity, temperature, the time of year (season variation) and the moisture content. damage dae8cb87a1

Skin care In Europe, cosmetics are regulated under a law named. with what an ingredient does (like glycerin keeping moisture in or petrolatum protecting the skin) dae8cb87a1

List of skin conditions Many skin conditions affect the human integumentary system—the organ system covering the entire surface of the body and composed of skin, hair, nails dae8cb87a1

== Function and characteristics == dae8cb87a1

Peeling skin syndrome Skin peeling is caused by sun, humidity, moisture, and friction. The acral form can be associated with TGM5. Peeling skin syndrome is also associated dae8cb87a1
