DMT has a rapid onset, intense effects, and a relatively short duration of action. For those reasons, DMT was known as the "businessman's trip" during the 1960s in the United States, as a user could access the full depth of a psychedelic experience in considerably less time than with other substances such as LSD or psilocybin mushrooms. DMT can be inhaled or injected and its effects depend on the dose, as well as the mode of administration. When inhaled or injected, the effects last about five to fifteen minutes. Effects can last three hours or more when orally ingested along with a monoamine oxidase inhibitor (MAOI), such as the ayahuasca brew of many native Amazonian tribes. DMT induces intense, often indescribable subjective experiences involving vivid visual hallucinations, altered sensory perception, ego dissolution, and encounters with seemingly autonomous entities. On November 18, 1978, 918 people died in a coordinated mass murder-suicide across three locations: the Jonestown compound, a nearby airstrip in Port Kaituma, and the group's headquarters in Georgetown, making "Jonestown" internationally infamous. The name of the settlement became synonymous with the incidents at those locations. diphenhydramine, promethazine, chlorpromazine, chloroquine, diazepam, chloral hydrate and cyanide d6fc57db34

Sun protective measures like sunscreen and sun protective clothing are widely accepted to prevent sunburn and some types of skin cancer. Special populations, including children, are especially susceptible to sunburn and protective measures should be used to prevent damage. d6fc57db34

Sunburn Common symptoms in humans and other animals include red or reddish skin that is hot to the touch or painful, general fatigue, and mild dizziness. Excessive UV radiation is the leading cause of (primarily) non-malignant skin tumors, which in extreme cases can be life-threatening. include 6-methylcoumarin, aminobenzoic acid and esters, chlorpromazine, promethazine, diclofenac, sulfonamides, and sulfonylureas. Other symptoms include blistering, peeling skin, swelling, itching, and nausea. Sunburn is an inflammatory response in the tissue triggered by the nucleic acid damage caused by UV radiation. Unlike phototoxic reactions Sunburn is a form of radiation burn that affects living tissue, such as skin, that results from an overexposure to ultraviolet (UV) radiation, usually from the Sun d6fc57db34

AutoTune was initially intended to disguise or correct off-key inaccuracies, allowing vocal tracks to be perfectly tuned. Cher's 1998 song "Believe" popularized the use of AutoTune to deliberately distort vocals, a technique that became known as the "Cher effect". It has since been used by many artists in different genres, including Daft Punk, Radiohead, T-Pain and Kanye West. In 2018, the music critic Simon Reynolds wrote that AutoTune had "revolutionized popular music", calling its use for effects "the fad that just wouldn't fade. Its use is now more entrenched than ever." d6fc57db34

Drug use in music Sporadic calls for music censorship in different countries over the past decades have also had vastly different outcomes. References to recreational drug use in various forms have been common as the modern record industry developed, particularly in terms of popular music genres such as pop rock singles, dance releases, and the like. Social, cultural, legal, and economic challenges to the existence of music referring to recreational drugs have prompted several studies on the link between such references and increased usage among teens and young adults. Many complicating factors exist; in particular, a song that describes substance abuse in a depressive, emotionally blank fashion may trigger curiosity for one listener as well as revulsion for another. As stated in the old saying "wine, women and song", association of music with using various substances

A total of 909 individuals died in Jonestown itself, all but two from apparent cyanide poisoning, many of whom were injected against their will. Jones and some Peoples Temple members referred to the act as a "revolutionary suicide" on an audio tape of the event, and in prior recorded discussions. The poisonings in Jonestown followed the murder of five others, including U.S. Congressman Leo Ryan, by Temple members at Port Kaituma, an act that Jones ordered. Four other Temple members committed murder-suicide in Georgetown at Jones's command. d6fc57db34 The spaceflight environment poses many unique stressors to the human body, including g-force, microgravity, unusual atmospheres such as low pressure or high carbon dioxide, and space radiation. These challenges are addressed by studying the physiological effects in space, and the application of preventive medicine, primary care, emergency medicine, acute care medicine, austere medicine, public health, and toxicology, in order to prevent and treat medical problems in space. This expertise is additionally used to inform vehicle systems design to minimize the risk to human health and performance while meeting mission objectives. d6fc57db34

When the gravitational field is non-uniform, a body in free fall experiences tidal forces and is not stress-free. Near a black hole, such tidal effects can be very strong, leading to spaghettification. In the case of the Earth, the effects are minor, especially on objects of relatively small dimensions (such as the human body or a spacecraft) and the overall sensation of weightlessness in these cases is preserved. This condition is known as microgravity, and it prevails... d6fc57db34

" To date, the most common intervention is promethazine, an injectable antihistamine with antiemetic properties, but sedation Weightlessness is the complete or near-complete absence of the sensation of weight, i. , zero apparent weight d6fc57db34

Weight is a measurement of the force on an object at rest in a relatively strong gravitational field (such as on the surface of the Earth). These weight-sensations originate from contact with supporting floors, seats, beds, scales, and the like. A sensation of weight is also produced, even when the gravitational field is zero, when contact forces act upon and overcome a body's inertia by mechanical, non-gravitational forces- such as in a centrifuge, a rotating space station, or within an accelerating vehicle. d6fc57db34 == Function == d6fc57db34 Astronautical hygiene is the application... d6fc57db34

The drug acts as a potent and selective partial agonist of the GABAA receptor, the major signaling receptor of the inhibitory endogenous neurotransmitter γ -aminobutyric acid (GABA). However, it acts as a preferential supra-maximal agonist at extrasynaptic δ subunit-containing GABAA receptors. In contrast to GABAA receptor positive allosteric modulators like benzodiazepines and Z drugs, gaboxadol is an orthosteric agonist of the GABAA receptor, acting on the same site as GABA rather than at an allosteric regulatory site. As a result, gaboxadol has differing effects from benzodiazepines and related drugs. Gaboxadol is a conformationally constrained synthetic analogue of GABA and of muscimol, an alkaloid and hallucinogen found in *Amanita*... d6fc57db34 Mazatec shamans have a long and continuous tradition of religious use of *S. divinorum* to facilitate visionary states of consciousness during spiritual healing sessions.
