A pregnancy may end in a live birth, a miscarriage, an induced abortion, or a stillbirth. Childbirth typically occurs around 40 weeks from the start of the last menstrual period (LMP), a span known as the gestational age; this is just over nine months. Counting by fertilization age, the length is about 38 weeks. Implantation occurs on average 8–9 days after fertilization. An embryo is the term for the developing offspring during the first seven weeks following implantation (i.e. ten weeks' gestational age), after which the term fetus is used until the birth of a baby. 73e79e02c9 Fasting during Ramadan is a way for Muslims to develop self-control, piety, and compassion for those in need. The fast is observed every day of Ramadan unless a person falls under exemptions such as illness, travel, pregnancy, or other health conditions. 73e79e02c9 The exact causes of hyperemesis gravidarum are unknown. Risk factors include the first pregnancy, multiple pregnancy, obesity, prior or family history of HG, and trophoblastic disorder. A December 2023 study published in Nature indicated a link between HG and abnormally high levels of the hormone GDF15, as well as increased sensitivity to that specific hormone. 73e79e02c9

Psychological adaptation Pregnancy induced sickness only typically A psychological adaptation is a functional, cognitive or behavioral trait that benefits an organism in its environment. For example, xenophobic attitudes and behaviors, some have claimed, appear to have certain EPM influences relating to disease aversion, however, in many environments these behaviors will have a detrimental effect on a person's fitness. These additional EPMs are the by-product traits of a species' evolutionary development (see spandrels), as well as the vestigial traits that no longer benefit the species' fitness. experiencing sickness have been found to avoid particular bitter or pungent smelling foods, potentially containing toxins. The principles of psychological adaptation rely on Darwin's theory of evolution and are important to the fields of evolutionary. Psychological adaptations include only the functional traits that increase the fitness of an organism, while EPMs refer to any psychological mechanism that developed through the processes of evolution. It can be difficult to tell whether a trait is vestigial or not, so some literature is more lenient and refers to vestigial traits as adaptations, even though they may no longer have adaptive functionality. Psychological adaptations fall under the scope of evolved psychological mechanisms (EPMs), however, EPMs refer to a less restricted set 73e79e02c9
