

Longitudinal Lines On Nails

Comparison of American football and rugby union These are the 5 metre lines and 15 A comparison of American football and rugby union is possible because of the games' shared origins, despite their dissimilarities. Two are marked 5 metres in from the touch lines and two a further ten metres in. are four longitudinal dotted lines 5d96e2dcc1

Acrokeratosis verruciformis Changes to the nails, such as thickening of the nail plate, leukonychia, longitudinal ridges, and nicks in the free edges, are Acrokeratosis verruciformis is a rare autosomal dominant disorder appearing at birth or in early childhood, characterized by skin lesions that are small, verrucous, flat papules resembling warts along with palmoplantar punctate keratoses and pits. However sporadic forms, whose less than 10 cases have been reported, presents at a later age, usually after the first decade and generally lack palmoplantar keratoses. symptom of the illness 5d96e2dcc1

Whether acrokeratosis verruciformis and Darier disease are related or distinct entities has been controversial, like Darier's disease, it is associated with defects in the ATP2A2 gene. however the specific mutations found in the ATP2A2 gene in acrokeratosis verruciformis have never been found in Darier's disease. 5d96e2dcc1 == Structure == 5d96e2dcc1

Muehrcke's nails In contrast to Beau's lines, they are not grooved (no 3-dimensional deformity), and in contrast to Mees' lines, the thumb is usually not involved. of HSA. Mees' lines - a similar appearance, except the lines are in the nail and move as the nail grows Half and half nails Terry's nails List of cutaneous Muehrcke's nails or Muehrcke's lines (apparent leukonychia striata) are changes in the fingernail that may be a sign of an underlying medical condition. The term refers to a set of one or more pale transverse bands extending all the way across the nail, parallel to the lunula 5d96e2dcc1

Nail disease Although the nail is a structure produced by the skin and is a skin appendage, nail diseases have a distinct classification as they have their own signs and symptoms which may relate to other medical conditions. The normal process of change is: brittle nails, straight nails, spoon-shaped A nail disease or onychosis is a disease or deformity of the nail. Some nail conditions that show signs of infection or inflammation may require medical assistance. when the nail curves upwards (becomes spoon-shaped) due to an iron deficiency 5d96e2dcc1

American Airlines obtained many of Eastern's routes from Miami International Airport to Latin America and the Caribbean. Delta Air Lines, Eastern's main competitor... 5d96e2dcc1

Leukonychia The most common cause is injury to the base of the nail (the matrix) where the nail is formed. The most common cause is injury to the base of the nail (the matrix) Leukonychia (or leuconychia) is a medical term for white discoloration appearing on nails. It is derived from the Greek words leuko 'white' and onyx 'nail'. It is derived from the Greek words leuko 'white' and onyx 'nail'. appearing on nails 5d96e2dcc1

The term lichenoid reaction (lichenoid eruption or lichenoid lesion) refers to a lesion of similar or identical histopathologic and clinical appearance to lichen planus (i.e., an area which resembles lichen planus, both to the naked eye and under a microscope). Sometimes dental materials or certain medications can cause lichenoid reactions. They can also... 5d96e2dcc1 The distinctive features are: 5d96e2dcc1

Murus gallicus approximately 2 ft (60 cm) intervals longitudinal timbers laid on the cross beams and attached with mortice joints, nails, or iron spikes through augered holes Murus gallicus or Gallic wall is a method of construction of defensive walls used to protect Iron Age hillforts and oppida of the La Tene period in Western Europe 5d96e2dcc1

The appearance of Muehrcke's lines is associated specifically with marked hypoalbuminemia (serum albumin ≤ 2.2 g/dL) indicating decreased protein synthesis, which may occur during periods of metabolic stress (e.g.... 5d96e2dcc1 == Physiology == 5d96e2dcc1

Railroad tie Generally laid perpendicular to the rails, ties transfer loads to the track ballast and subgrade, hold the rails upright and keep them spaced to the correct gauge. widely used, especially in Europe and Asia. Steel ties are common on secondary lines in the UK; plastic composite ties are also employed, although far A railroad tie, crosstie (American English), railway tie (Canadian English) or railway sleeper (Australian and British English) is a rectangular support for the rails in railroad tracks 5d96e2dcc1

During airline deregulation in the late 1970s and early 1980s, labor disputes and high debt loads strained the company under the leadership of former astronaut Frank Borman. Frank Lorenzo acquired Eastern in 1985 and moved many of its assets to his other airlines, including Continental Airlines and Texas Air Corporation. After continued labor disputes and a crippling strike in 1989, Eastern ran out of money and was liquidated in 1991. 5d96e2dcc1 Muehrcke's lines are a strong indicator of hypoalbuminemia, which can result from a variety of different causes. 5d96e2dcc1 The lines are actually in the

vascular bed underneath the nail plate. As such, they do not move with nail growth, and disappear when pressure is applied to the nail (blanching the underlying nail bed): this distinguishes them from "true leukonychia striata" such as Mees' lines. As in Terry's and half-and-half nails, the pattern is thought to be formed by bands of localized edema exerting pressure on the surrounding capillaries.

Lichen planus It is characterized by polygonal, flat-topped, violaceous papules and plaques with overlying, reticulated, fine white scale (Wickham's striae), commonly affecting dorsal hands, flexural wrists and forearms, trunk, anterior lower legs, and oral mucosa. Nails characterized by irregular longitudinal grooving and ridging of the nail plate, thinning of the nail plate, pterygium formation Lichen planus (LP) is a chronic inflammatory and immune mediated disease that affects the skin, nails, hair, and mucous membranes. The cause is unknown, but it is thought to be the result of an autoimmune process with an unknown initial trigger. It is not an actual lichen, but is named for its appearance. "inverse lichen planus". Although there is a broad clinical range of LP manifestations, the skin and oral cavity remain the major sites of involvement. The hue may be gray-brown in people with darker skin. There is no cure, but many medications and procedures have been used in efforts to control the symptoms

Nail (anatomy) Fingernails and toenails are made of a tough rigid protein called alpha-keratin, a polymer also found in the claws, hooves, and horns of vertebrates. As oxygen is needed for healthy nails, an iron deficiency or anemia can lead to longitudinal ridges A nail is a protective plate characteristically found at the tip of the digits (fingers and toes) of almost all primates (except for marmosets), homologous to the claws in other tetrapod animals. the nails to become flat or concave, rather than convex

5d96e2dcc1

Clinical signs of acrokeratosis include verrucous plaques and flat-topped, polygonal papules. The lesions range in hue from brown to skin tone, and their friction might cause vesicles. The backs of the hands and feet's proximal and distal interphalangeal joints are typically where the lesions are seen. Lesions are less common and only occasionally seen on other body parts. The frontal scalp, flexures, and oral mucosa are not affected by the... 5d96e2dcc1 Eastern was one of the "Big Four" domestic airlines created by the Spoils Conferences of 1930, and was headed in its early years by World War I flying ace Eddie Rickenbacker. It had a near monopoly in air travel between New York and Florida from the 1930s until the 1950s and dominated this market for decades afterward. 5d96e2dcc1 == Types == 5d96e2dcc1 Rails in North America may be fastened to the tie by a railroad spike. Iron/steel baseplates screwed to the tie and secured to the rail... 5d96e2dcc1

Eastern Air Lines Eastern Air Lines (also colloquially known as Eastern) was a trunk carrier, a scheduled airline in the United States that operated from 1926 to 1991. Eastern Air Lines (also colloquially known as Eastern) was a trunk carrier, a scheduled airline in the United States that operated from 1926 to 1991. Before its dissolution, it was headquartered at Miami International Airport in an unincorporated area of Miami-Dade County, Florida

Railroad ties are traditionally made of wood, but prestressed concrete is now also widely used, especially in Europe and Asia. Steel ties are common on secondary lines in the UK; plastic composite ties are also employed, although far less than wood or concrete. As of January 2008, the approximate market share in North America for traditional and wood ties was 91.5%, the remainder being concrete, steel, azobé (red ironwood) and plastic composite. 5d96e2dcc1 Tie spacing may depend on the type of tie, traffic loads and other requirements, for example 2,640 concrete ties per mile (1,640/km) on North American mainline railroads to 2,112 timber ties per mile (1,312/km) on London, Midland and Scottish Railway jointed track. 5d96e2dcc1 == Signs and symptoms == 5d96e2dcc1 == Basic features == 5d96e2dcc1
