Pessaries come in different shapes and sizes, so it is important that individuals be fitted for them by health care professionals

to avoid any complications. However, there are a few instances and circumstances that allow pessaries to be purchased without a prescription or without seeking help from a health care professional. Some side effects may occur if pessaries are not sized properly or regularly maintained, but with the appropriate care, pessaries are generally safe and well tolerated. 6ef5578549 The term "pelvic floor dysfunction" has been criticized since it does not represent a particular pelvic floor disorder. It has therefore been recommended that the term not be used in medical literature without additional clarification... 6ef5578549

Cervical effacement This process occurs during labor to prepare the cervix for dilation to allow the fetus to pass through the vagina. While this is a normal, physiological process that occurs at the later end of pregnancy, it can also be induced through medications and procedures. Palamara F, Lojacono A, Prefumo F, Frusca T (2010). "A randomized controlled trial of 24-hour vaginal dinoprostone pessary compared to gel for induction Cervical effacement or cervical ripening refers to the thinning and shortening of the cervix 6ef5578549

In the 1920s, cervical caps (and also diaphragms) were often just called pessaries. 6ef5578549 Side effects are usually very few. Use may increase the risk of bacterial vaginosis and urinary tract infections. If left in the vagina for more than 24 hours toxic shock syndrome may occur. While use may decrease the risk of sexually transmitted infections, it is not very effective at doing so. There are a number of types of

diaphragms with different rim and spring designs. They may be made from latex, silicone, or natural rubber. They work by blocking access to and holding spermicide near the cervix. 6ef5578549 Before inserting or removing a diaphragm, one's hands should be washed to avoid introducing harmful bacteria into the vaginal canal. 6ef5578549

Overflow incontinence... 6ef5578549 During gestation, the cervix maintains pregnancy by increasing synthesis of various proteins. These proteins have defined interactions that allow the formation of matrix proteins to help fortify the uterine cervix. Toward the end of pregnancy, a series of hormone-mediated biochemical process takes place to degrade the collagen and fiber network to cause the cervix to ripen during labor. Failure to ripen the cervix during labor may delay its onset and cause complications. Current efforts to induce labor include pharmacologic, non-pharmacologic, mechanical and surgical methods. 6ef5578549 == Ancient world == 6ef5578549
