

Características Generales Del Páncreas

There's something I've been wondering about for years: If/when we do find extraterrestrial life, how would we go about classifying it? Considering the ideal of having taxonomy reflect genetic lineage, would you start an entirely new tree for them - maybe put all life on Earth in "Superdomain Terrania", and put all life on Mars in "Superdomain Martiana"? Does anyone know of any proposals that have been made for extraterrestrial taxa? ad7d77aae9 See Xenobiology, for starters. — X [Mac Davis] (SUPERDESK|Help me improve)01:15, 2 October 2006 (UTC) ad7d77aae9 Many thanks to whomever responds, --The Lazar 00:43, 2 October 2006 (UTC) ad7d77aae9

David Velázquez Fernández Biopsia de hígado por aspiración con aguja fina (1994) Características clínicas y evolución de la hipercalcemia grave por hiperparatiroidismo David Velázquez Fernández is a Mexican surgeon and researcher attached to the Endocrine Surgery and Advanced Laparoscopy at the Department of Surgery of the Salvador Zubirán National Institute of Health Sciences and Nutrition and with the Clinic of Nutrition, Obesity and Metabolic Disorders at the ABC Medical Center. at INCMNSZ. He studied medicine at the Universidad Veracruzana, and received his doctorate from the Karolinska Institutet in Stockholm, Sweden ad7d77aae9

He specializes in three areas of work. The first two are healthcare and surgery, giving consultation to patients with endocrine disease as well as general surgery. The third area is research, with several projects both clinical and basic research in genomic medicine related endocrine tumors a genomic of polygenic obesity. He teaches various medical schools including the Monterrey Institute of Technology and Higher Education, Mexico City, the National Autonomous University of Mexico, the National Polytechnic Institute, the North-east University (UNE) at Tampico and the ABC Medical Center and the Salvador Zubirán National Institute of Health Sciences and Nutrition (INCMNSZ). ad7d77aae9 David Velázquez Fernández was born on March 13, 1969, in... ad7d77aae9 Taking the question a bit further, if we were to make a new superdomain for another planet, then would taxonomy tolerate "duplications" of basic taxa used for life on Earth? I mean, could you have "another" Domain Eukaryota for another

planet, if a group of extraterrestrial organisms fit our commonly accepted standards of what a eukaryote is? Could you have "another" Kingdom Animalia for another planet, if a group of organisms unambiguously met our commonly accepted standards of what an animal is? Well, I've looked there, but it doesn't really... == Life ==
