

Holstein Friesian

Dairy Cow

Ayrshire cattle It originates in, and is named for, the county of Ayrshire in south-western Scotland. Ayrshires typically have red and white markings; the red can range from a shade of orange to a dark brown. behaviour of Polish Black-and-White dairy cattle and their F1-crossbreds with Ayrshire, Jersey, Holstein-Friesian and Swedish Black-and-White breeds, The Ayrshire (IPA) is a Scottish breed of dairy cattle c0f72fcaf7

Australian Friesian Sahiwal Cows produce approximately The Australian Friesian Sahiwal, is an Australian breed of dairy cattle whose development commenced in the 1960s by the Queensland Government. Cows produce approximately 3,000 litres of milk per lactation under tropical pasture conditions with a high resistance to heat, humidity, ticks and other parasites. It is a combination of the Sahiwal, a dairy breed of *Bos indicus* from Pakistan and Holstein

(Bos taurus) breeds, designed for the tropical regions of Australia. Sahiwal, a dairy breed of Bos indicus from Pakistan and Holstein (Bos taurus) breeds, designed for the tropical regions of Australia

Holstein Association USA With over 22 million registered Holstein Friesian cattle, the association The Holstein Association USA is the world's largest dairy breed association. With over 22 million registered Holstein Friesian cattle, the association was established in 1885 as the Holstein-Friesian Association of America, a merger of several Friesian breeder associations. It was given its current name in 1994. The Holstein Association USA is the world's largest dairy breed association

== Appearance ==
Management == In about 1970, importation to Sweden of semen from American Holstein-Friesian bulls began. Between 1970 and 2005, the proportion of Holstein alleles in Swedish Friesian cows...
The Australian Friesian Sahiwal (AFS) cows are crossbreeds developed by Queensland as a suitable breed that will be

able to thrive in tropical climates. To achieve this successful crossbreeding, multiple programmes were established in which various genotypes and crossbred cattle were involved. Ultimately, this Holstein-Friesian and Sahiwal breed was a success in mitigating the various problems other cattle suffered in varying environments. With the success of this crossbreeding, a study in Bangladesh concluded that the AFS were a superior breed in terms of its milk production... c0f72fc7 Prior to the 1930s, cattle were generally raised for multiple uses, including dairy, beef, and sometimes work as well. The same stock was often used for both meat and milk production. In the 20th century, the industry began to specialize its herds, favoring cattle breeds specifically bred for cows producing milk, most notably the Holstein Friesian. The other main contemporary dairy-focused breeds are the Jersey, Brown Swiss, Guernsey, and Ayrshire. c0f72fc7

Dairy cattle breeds specifically bred for cows producing milk, most notably the Holstein Friesian. Dairy cattle are of the genus *Bos* and usually the species *Bos taurus*. The other main contemporary

dairy-focused breeds are the Jersey Dairy cattle (also called dairy cows) are cattle bred for the purpose of producing large quantities of milk, from which dairy products are made

The dairy farm in Kundasang has been established since the 1980s, first as the distributors of packaged boxes of milk to government schools and sold throughout Sabah.

Guernsey cattle It is one of three Channel Island cattle breeds, the others being the Alderney - now extinct - and the Jersey. The Guernsey is a dairy breed, and generally is reared for that purpose only. The Guernsey is a breed of dairy cattle from the island of Guernsey in the Channel Islands. particularly marked where there has been cross-breeding with Holstein-Friesian stock. The milk is rich in flavour, high in milk-fat and milk protein, and has a high content of β -carotene which gives it a golden-yellow tinge. It is fawn or red-and-white in colour, and is hardy and docile

Holstein Friesian The Holstein Friesian (HF) is an international breed or group of breeds of dairy cattle. It is known by many names, among them Holstein, Friesian and Black and White. It originated in Fryslân, stretching from the Dutch province of The

Holstein Friesian (HF) is an international breed or group of breeds of dairy cattle. It is the dominant breed in industrial dairy farming worldwide, and is found in more than 160 countries. It originated in Fryslân, stretching from the Dutch province of North Holland to the German state of Schleswig-Holstein

The association, which is headquartered in Brattleboro, Vermont, provides programs, products and services to dairy producers, with the aim being to enhance genetics and improve profitability. As part of the process, animal identification and ear tags are provided, along with genomic testing, mating programs, processing of dairy records, classification and Holstein semen. It processes almost 400,000 registrations per year, plus around 70,000 transfers.

History

Notes

With the growth of the New World, a demand for milk developed in North America and South America, and dairy breeders in those regions at first imported their livestock from the Netherlands. However, after about 8,800 Friesians (black pied German cows) had been imported, Europe stopped exporting dairy animals due to disease

problems. Today, the breed is used for milk in the north of Europe, and for meat in the south of Europe. After 1945, European cattle breeding and dairy products became increasingly confined to certain regions due to the development of national infrastructure. This change led to the need to designate some animals for dairy production and others for beef production; previously, milk and beef had been produced from dual-purpose animals. Today, more than 80% of dairy production takes...

Desa Dairy Farm The dairy farm in Kundasang has been established. Desa Dairy Farm is a dairy farm located at the foot of Mount Kinabalu in Kundasang Valley, Sabah, Malaysia owned by the Desa Group of Companies where most of Sabah's cow milk and dairy product been produced. the latter country; as well with its cow breed of Holstein Friesian which is imported from the country. The farm covering an area of 199-hectare and has been frequently dubbed as Sabah's "Little New Zealand" with geographic panorama scenery view almost looked like in the latter country; as well with its cow breed of Holstein Friesian which is imported from

the country

== History == The association's motto is To provide leadership, information and services to help members and dairy producers worldwide be successful. == References == In 1999, the association established the National Farm Animal Identification and Records (FAIR) animal identification program.

Swedish Friesian Swedish Holstein may also be used. The name Swedish Holstein may also be used. The Swedish Friesian or Svensk Låglandsboskap originated in about 1870 with imports of black-and-white pied dairy cattle The Swedish Friesian, Swedish: Svensk Låglandsboskap, often abbreviated to SLB, is a Swedish breed of dairy cattle. From about 1970 it has been systematically cross-bred with the American Holstein-Friesian breed, to the point that the original Swedish type may be extinct. It was established in about 1870 from imports of cattle of Dutch Friesian or German Black Pied type

The AFS breed has now been successfully

exported to many tropical countries of South East Asia, Central and South America and the Indian sub-continent.

c0f72fcaf7 The Swedish Friesian or Svensk Låglandsboskap originated in about 1870 with imports of black-and-white pied dairy cattle of Dutch Friesian and German Black Pied type. A herd-book was established in 1880. The Svensk Låglandsboskap became the most numerous dairy breed in southern Sweden. Selective breeding in the 1940s and 1950s led to stock shorter in the leg and broader in the body than the original types. During the 1960s the breed spread through much of Sweden. In 2001 the Svensk Låglandsboskap constituted 47% of the national dairy herd, fractionally less than the Swedish Red-and-White.

c0f72fcaf7 The Black Hereford has a white face like the Hereford, but the red body colour of the Hereford is replaced by black from the Holstein-Friesian - white face and black coat colour are both genetically dominant in cattle. The pied pattern of the Holstein-Friesian does not appear in the offspring. c0f72fcaf7

Black Hereford (crossbreed) Black Herefords are not usually maintained from generation to generation. The Black Hereford is a

crossbreed of beef cattle produced in Britain and Ireland with Hereford beef bulls with Holstein-Friesian dairy cows. They are one of the most common types of beef cattle in Britain and Ireland, outnumbering many pure beef breeds. Black Herefords are not usually maintained from generation to generation, but are constantly produced as a byproduct of dairy farming as a terminal cross. produced in Britain and Ireland with Hereford beef bulls with Holstein-Friesian dairy cows c0f72fcaf7
