Janus kinase inhibitor Zoetis. "FDA Approves Apoquel (oclacitinib tablet) to Control Itch and Inflammation in Allergic Dogs" (Press release). 16 May 2013

A Janus kinase inhibitor, also known as JAK inhibitor or jakinib, is a type of immune modulating medication, which inhibits the activity of one or more of the Janus kinase family of enzymes (JAK1, JAK2, JAK3, TYK2), thereby interfering with the JAK-STAT signaling pathway in lymphocytes. PMID 24495176. PMC 4265276 95191c4a74

JAK inhibitors are used in the treatment of some cancers and inflammatory diseases such as rheumatoid arthritis and various skin conditions. A Janus kinase 3 inhibitor is attractive as a possible treatment of various autoimmune diseases since its function is mainly restricted to lymphocytes. JAK inhibitors can suppress the signaling of pro-inflammatory cytokines. Pro-inflammatory cytokines are major contributors to the cause of an over active immune system, resulting in inflammation and pain. JAK inhibitors have the ability to slow down this over activity by the suppression of the intracellular signaling. 95191c4a74 Oclacitinib is labeled to treat atopic dermatitis and itchiness (pruritus) caused by allergies in dogs, though it has also been used to reduce the itchiness and dermatitis caused by flea infestations. While some say it is best only for acute flares of itchiness, others claim that it is also useful in chronic atopic dermatitis. It is considered to be highly effective in dogs and has been established as safe for at least short-term use. Its efficacy is comparable to prednisolone early in treatment, and although oclacitinib has been shown to be... 95191c4a74 == Uses == 95191c4a74

Oclacitinib It inhibits signal transduction when the JAK is activated and thereby helps downregulate expression of inflammatory cytokine. Chemically, it is a synthetic cyclohexylamino-pyrrolopyrimidine Janus kinase inhibitor (JAK inhibitor) that is relatively selective for JAK1. brand name Apoquel among others, is a veterinary medication used in the control of atopic dermatitis and pruritus from allergic dermatitis in dogs at least Oclacitinib, sold under the brand name Apoquel among others, is a veterinary medication used in the control of atopic dermatitis and pruritus from allergic dermatitis in dogs at least 12 months of age 95191c4a74

== Contraindications == 95191c4a74 Oclacitinib was approved for use in the United States in 2013 and in the European Union in 2023. A flavored chewable form was approved for use in the United States in 2023. 95191c4a74 JAK enzymes are part of the JAK/STAT pathway. This signaling pathway transmits chemical signals from the outside of cells, specifically lymphocytes, and into the cell nucleus. Signals relayed by JAK3 aid in the maturation and regulation of growth of T cells and natural killer... 95191c4a74
