

Definition Of A Shrew

Gracile shrew mole (*Uropsilus gracilis*) 2c9ab454a1 True's shrew mole (*Dymecodon pilirostris*) 2c9ab454a1 As a reference to actual women, rather than the stock character, the shrew is considered old-fashioned, and the synonym scold (as a noun) is archaic. The term shrew is still used to describe the stock character in fiction and folk storytelling. None of these terms are usually applied to males in Modern English. 2c9ab454a1

Shrew (stock character) The theme is illustrated in Shakespeare's play *The Taming of the Shrew*. *Taming of the Shrew*. As a reference to actual women, rather than the stock character, the shrew is considered old-fashioned, and the synonym scold (as a noun) The shrew – an unpleasant, ill-tempered woman characterised by scolding, nagging, and aggression – is a comedic stock character in literature and folklore, both Western and Eastern 2c9ab454a1

Shrewlike rat Shrewlike rats evolved to be vermivores and insectivores feeding on soft-bodied invertebrates associated with leaf litter. They look a great deal like shrews and are an example of convergent evolution. They look a great deal like shrews and are an example of convergent The shrewlike rats, genus *Rhynchomys*, also known as the tweezer-beaked rats are a group of unusual Old World rats found only on the island of Luzon in the Philippines. are a group of unusual Old World rats found only on the island of Luzon in the Philippines 2c9ab454a1

Fraser's musk shrew This large black shrew was first described by the British zoologist Louis Fraser in 1843. lowland forests. It is found in Benin, Cameroon, Ivory Coast, Equatorial Guinea, Ghana, Guinea, Liberia, Nigeria, São Tomé and Príncipe, Sierra Leone, and Togo. Its natural habitat is subtropical or tropical moist lowland forests. Its exact definition is unclear; the karyotype comes from Ivory Coast but not from Equatorial Guinea, which is given as the type locality. Its exact definition is unclear; the karyotype comes Fraser's musk shrew (*Crocidura poensis*) is a species of mammal in the family Soricidae. This large black shrew was first described by the British zoologist Louis Fraser in 1843 2c9ab454a1

Venomous mammal Mammalian venoms form a heterogeneous group with different compositions and modes of action, from four orders of mammals: Eulipotyphla, Monotremata, Primates, and Chiroptera. competition may be a secondary aspect of the insectivore venom. The northern short-tailed shrew (*Blarina brevicauda*), Mediterranean water shrew (*Neomys anomalus*) Venomous mammals are mammals that produce venom, which they use to kill or disable prey, to defend themselves from predators or conspecifics or in agonistic encounters. To explain the rarity of venom delivery in Mammalia, Mark Dufton of the University of Strathclyde has suggested that modern mammalian predators do not need venom because they are able to kill quickly with their teeth or claws, whereas venom, no matter how sophisticated, requires time to disable prey 2c9ab454a1

Fraser's musk shrew is native to tropical western and central Africa. Its range extends from Guinea, Sierra Leone and Liberia through Ivory Coast, Ghana and Nigeria to Cameroon. Its range may extend further to the east than Cameroon because there is some confusion between its range and that of the very similar Bates's shrew (*Crocidura batesi*), a species which is found in Cameroon, Republic of the Congo, Equatorial Guinea and Gabon. Fraser's musk shrew is also present on the islands of São Tomé and Príncipe, located in the Gulf of Guinea. Its altitudinal range is between sea level and a few hundred metres. It typically occurs in primary... 2c9ab454a1 Folklorist Jan Harold Brunvand collected over 400 literary and oral versions of shrew stories in 30 cultural groups in Europe in the middle 20th century. 2c9ab454a1 Japanese shrew mole (*Urotrichus talpoides*) 2c9ab454a1

List of venomous animals all but a few specific organisms; what may be fatal to one species may be totally insignificant to another species. Because the definition of "venomous" 2c9ab454a1

In spite of the rarity of venom among extant mammals, venom may be an ancestral feature among mammals, as venomous spurs akin to those of the modern platypus are found in most non-therian Mammaliaformes groups. 2c9ab454a1 == Distribution and habitat == 2c9ab454a1 American shrew mole (*Neurotrichus gibbsii*) 2c9ab454a1 Inquisitive shrew mole (*Uropsilus investigator*) 2c9ab454a1 One species in the tribe Neurotrichini, native to Pacific North America: 2c9ab454a1

List of mammals of Mexico gray shrew, *Notiosorex cockrumi* LC Crawford's gray shrew, *Notiosorex crawfordi* LC Large-eared gray shrew, *Notiosorex evotis* LC Villa's gray shrew, *Notiosorex* 2c9ab454a1

Iberian shrew It is found in Portugal and Spain. It is found in Portugal and Spain. The Iberian shrew or Lagranja shrew (*Sorex granarius*) is a species of mammal in the family Soricidae. Relative to other The Iberian shrew or Lagranja shrew (*Sorex granarius*) is a species of mammal in the family Soricidae 2c9ab454a1

Equivalent teeth shrew mole (*Uropsilus aequodonenia*) 2c9ab454a1 Relative to other *Sorex* species, *S. granarius* is intermediate in size, with a total body length (including the tail) of approximately 103.6 mm and an average weight of 6.3 g. Adults are identified by their dark-colored back, which contrasts with their lighter tan sides and off-white belly. The fur of young shrews has only two discernible colors: the darker color on the back and the lighter color on the belly. In both adults and juveniles, the fur is also adapted for cold, damp habitats: each guard hair possesses an indentation along its length that helps to prevent water from reaching the body. 2c9ab454a1 The skull of *S. granarius* can be used to distinguish it from other species belonging to the European *Sorex araneus* group of shrews. Comparatively, the snout of *S. granarius* is small and flat, the mandible possesses a diminished coronoid process and a narrow angular process, and the temporal fossa of the skull resembles a triangle. 2c9ab454a1 The snout and rostrum are very long. Eyes are small. Head and body is 18.8–21.5 cm with a tail 10.5–14.6 cm. Only two molars are present on each side of the upper and lower jaws; these are small and peg-like. Incisors are described as needle-like and mandibles as delicate. Their characteristic method of locomotion has given rise to the epithet "hopping rats," describing their method of pouncing on an earthworm prey before it can slide back into its hole. 2c9ab454a1

The Taming of the Shrew on screen On television, perhaps the most significant adaptation is the 1980 BBC Television Shakespeare version, directed by Jonathan Miller and starring John Cleese and Sarah Badel. The best-known cinematic adaptations are Sam Taylor's 1929 *The Taming of the Shrew* and Franco Zeffirelli's 1967 *The Taming of the Shrew*, both of which starred the most famous celebrity couples of their era; Mary Pickford and Douglas Fairbanks in 1929 and Elizabeth Taylor and Richard Burton in 1967. The best-known cinematic adaptations are Sam Taylor's 1929 *The Taming of the Shrew* and Franco Zeffirelli's 1967 *The Taming of the Shrew*. There have been numerous on screen adaptations of Shakespeare's *The Taming of the Shrew*. adaptations of Shakespeare's *The Taming of the Shrew* 2c9ab454a1

Venom is much more common among other vertebrates; there are many more species of venomous reptiles (e.g. venomous snakes) and fish (e.g. stonefish). Some birds are poisonous to eat or touch (e.g. hooded pitohui) though no bird species is known to be venomous. There are only a few species of venomous amphibians; certain salamandrid salamanders... 2c9ab454a1 This stereotype or cliché was common in early- to mid-20th-century films, and retains some present-day currency, often shifted somewhat toward the virtues of the stock female character of the heroic virago. 2c9ab454a1 Anderson's shrew mole (*Uropsilus andersoni*) 2c9ab454a1 Two species in the tribe Urotrichini, or himizu, native to Japan: 2c9ab454a1

Vermivore feed exclusively on worms is *Paucidentomys vermidax*, a rodent species of a type commonly known as shrew rats which was discovered in 2011 in Indonesia. The 2c9ab454a1
