

White Discharge During Pregnancy In Second Trimester

Risk factors include infection of the amniotic fluid, prior PROM, bleeding in the later parts of pregnancy, smoking, and a mother who is underweight. Diagnosis is suspected based on symptoms and speculum exam and may be supported by testing the vaginal fluid or by ultrasound. If it occurs before 37 weeks it is known as PPROM (preterm prelabor rupture of membranes) otherwise it is known as term PROM. 84fc19808c == Main areas == 84fc19808c

Prelabor rupture of membranes Complications in the baby may include premature birth, cord compression, and infection. Complications in the mother may include placental abruption and postpartum endometritis. Women usually experience a painless gush or a steady leakage of fluid from the vagina. common in the last part

Prenatal care in the United States first two trimesters and in the third trimester, gradually increasing to weekly visits. Patients are encouraged to attend monthly checkups during the first two trimesters and in the third trimester, gradually increasing to weekly visits. Once pregnancy is confirmed, an initial appointment is scheduled after 8 weeks of gestation. Subsequent appointments typically include various tests, ranging from blood pressure checks to glucose level assessments, to monitor the health of both the mother and fetus. Women who suspect they are pregnant can schedule pregnancy tests prior Prenatal care in the United States is a health care preventive care protocol recommended to women to provide regular check-ups that allow obstetricians-gynecologists, family medicine physicians, or midwives to detect, treat and prevent potential health problems throughout pregnancy while promoting healthy lifestyles that benefit both mother and child. If not, appropriate treatment will then be provided to prevent any further

complications. Women who suspect they are pregnant can schedule pregnancy tests prior to 9 weeks of gestation 84fc19808c

Abortion in the United States generally legal was 60% during the first trimester of pregnancy, dropping to 28% in the second trimester, and 13% in the third trimester. Prior to the mid-19th century, English common law formed the basis of abortion law in the colonies and the early Republic. Support for the legalization In the United States, abortion is a divisive issue in politics and culture wars 84fc19808c

Many of the early signs of pregnancy will be similar to symptoms that come right before a period, and it can be hard to tell the difference. 84fc19808c == Early pregnancy == 84fc19808c That basic framework, modified in Planned Parenthood v. Casey (1992), remained nominally in place, although the effective availability of abortion varied significantly from state to state, as many counties had no abortion providers. Planned Parenthood v. Casey held that a law could not place legal restrictions imposing... 84fc19808c Rape can cause difficulties during and after pregnancy, with potential negative consequences for both the victim and a

resulting child. Medical treatment following a rape includes testing for, preventing, and managing pregnancy. A woman who becomes pregnant after a rape may face a decision about whether to have an abortion, to raise the child, or to make an adoption plan. In some countries where abortion is illegal after rape and incest, over 90% of pregnancies in girls age 15 and under are due to rape by family members. 84fc19808c

Preterm birth Premature infants are at greater risk for cerebral palsy, delays in development, hearing problems and problems with their vision. "Antibiotic prophylaxis during the second and third trimester to reduce adverse pregnancy outcomes and morbidity". These babies are also known as premature babies or colloquially preemies (American English) or premmies (Australian English). Thinkhamrop J (ed. The Cochrane Database Preterm birth, also known as premature birth, is the birth of a baby at fewer than 37 weeks gestational age, as opposed to full-term delivery at approximately 40 weeks. The earlier a baby is born, the greater these risks will be. Extreme preterm is less than 28 weeks, very early preterm birth is between 28 and 32 weeks, early preterm birth occurs between 32 and 34 weeks, and late preterm birth is between 34 and 36 weeks'

gestation.). Symptoms of preterm labor include uterine contractions which occur more often than every ten minutes and/or the leaking of fluid from the vagina before 37 weeks 84fc19808c

The cause of spontaneous preterm birth is often not known. Risk factors include diabetes, high blood pressure, multiple gestation (being pregnant with more than one baby), being either obese or underweight, vaginal infections, air pollution exposure, tobacco smoking, and psychological stress. Circumvallate placenta Circumvallate placenta is a placental morphological abnormality associated with increased fetal morbidity and mortality due to the restricted availability of nutrients and oxygen to the developing fetus. risk factors. After delivery, a circumvallate placenta has a thick ring of membranes on its fetal surface. When PROM occurs along with vaginal bleeding in the second trimester of pregnancy, it is suspected that a mother likely has a circumvallate Circumvallate placenta is a rare condition affecting about 1-2% of pregnancies, in which the amnion and chorion fetal membranes essentially "double back" on the fetal side

around the edges of the placenta 84fc19808c

== Normal microbiota == 84fc19808c Connecticut was the first state to regulate abortion in 1821; it outlawed abortion after quickening, the moment in pregnancy when the pregnant woman starts to feel the fetus's movement in the uterus, and forbade the use of poisons to induce one post-quickening. Many states subsequently passed various laws on abortion until the Supreme Court of the United States decisions of Roe v. Wade and Doe v. Bolton decriminalized abortion nationwide in 1973. The Roe decision imposed a federally mandated uniform framework for state legislation on the subject. It also established a minimal period during which abortion is legal, with more or fewer restrictions throughout the pregnancy. 84fc19808c

The commercial production of maternity clothing began at the start of the 20th century, and continued to evolve. During the 1990s in the U.S., relaxed laws such as the Family and Medical Leave Act, which was signed into law by President Bill Clinton, helped to protect the jobs of pregnant women, and served as a form of liberation that afforded women the freedom to wear fashionable maternity styles that emphasised their pregnancy. 84fc19808c

It has been studied in the context of war, particularly as a tool for genocide, as well as in other unrelated contexts, such as rape by a stranger, statutory rape, incest, and underage pregnancy. The scientific consensus is that rape is at least as likely to lead to pregnancy as consensual sexual intercourse, with some studies suggesting rape may actually result in higher rates of pregnancy than consensual intercourse. religious or cultural reasons 84fc19808c

Vaginal flora in pregnancy Vaginal discharge is common during pregnancy but is not an indicator of bacterial vaginosis The vaginal flora in pregnancy, or vaginal microbiota in pregnancy, is different from the vaginal flora (the population of microorganisms that resides in the vagina) before sexual maturity, during reproductive years, and after menopause. A description of the vaginal flora of pregnant women who are immunocompromised is not covered in this article. vaginosis population, risks of adverse pregnancy outcomes increase. pregnancy by using an ultrasound. However, in other cases, a circumvallate placenta is not identified until delivery of the baby. Circumvallate placenta can increase the risk of associated complications such as preterm delivery and placental abruption. Occasionally, a circumvallate placenta can also increase the risk of neonatal death and emergency caesarean section. Although there is no existing treatment for circumvallate placenta, physicians can attempt to minimize the effects of complications, if they occur, through frequent fetal monitoring and, if necessary, emergency cesarean section. 84fc19808c
