

How A Planet Is Created

== Publication history == 0c1e9c5fb8 The issue of a clear definition for planet came to a head in January 2005 with the discovery of the trans-Neptunian object Eris, a body more massive than the smallest then-accepted planet, Pluto. In its August 2006 response, the International Astronomical Union (IAU), which is recognised by astronomers as the international governing body responsible for resolving issues of... 0c1e9c5fb8

The Federation starship Enterprise crew revisits a fondly remembered "amusement park" planet, hoping for some rest and relaxation. However, shortly after landing

Dr. McCoy is attacked by the Queen of Hearts and Lt. Uhura is captured by the planet's master computer, who has come to resent being made to serve others and seeks to use the Enterprise to travel the galaxy in search of other computers. To this end, it takes control of the Enterprise computer and starts manipulating the ship's systems. 0c1e9c5fb8 Smarter Planet was officially formed in November 2008, when IBM's Chairman, CEO, and President Sam Palmisano at the Council on Foreign Relations presented a new agenda for building a "smarter planet". In his speech, he emphasized how the world's systems and industries are becoming more interconnected and intelligent, and that leaders and citizens can take advantage of this state of affairs to improve these systems and industries. In January 2010, Sam Palmisano gave a follow-up speech to... 0c1e9c5fb8

0c1e9c5fb8 In the novel, large deposits of dilithium are detected on a colony planet, and delegations are sent by the United Federation of Planets and the Klingon Empire to negotiate for mining rights (neither able to openly fight against the other because of the "Organian Lightbulbs", a reference to the Organians from the original series). They find the planet Direidi and its inhabitants to be very strange indeed. The planet's inhabitants occasionally break into song to explain their narratives or seemingly attack the visitors. Both crews (as well as the three-person crew of the Federation prospector that found the planet in the first place) get into various adventures with the planet's inhabitants and each other. In the end, it turns out that the inhabitants have set everything up according to "Plan C"—Comedy. All of the adventures the two crews encountered were designed to soften them up so that they wouldn't mine the whole planet, but would

be willing to work with the inhabitants and each other. 0c1e9c5fb8 == Plot == 0c1e9c5fb8

The best available theory of planet formation is the nebular hypothesis, which posits that an interstellar cloud collapses out of a nebula to create a young protostar orbited by a protoplanetary disk. The Solar System has eight planets by the most restrictive definition of the term: the terrestrial planets Mercury, Venus, Earth, and Mars, and the giant planets Jupiter, Saturn, Uranus, and Neptune 0c1e9c5fb8

Definition of planet Greek astronomers employed the term ἀστέρες πλανῆται (asteres planetai), 'wandering stars', for star-like objects which apparently moved over the sky. Over the millennia, the term

Kurzweil describes a series of thought experiments which suggest to him that the brain contains a hierarchy of pattern recognizers. Based on this he introduces his Pattern Recognition Theory of Mind (PRTM). He says the neocortex contains 300 million very general pattern recognition circuits and

argues that they are responsible for most aspects of human thought. He also suggests that the brain is a "recursive probabilistic fractal" whose line of code is represented within the 30-100 million bytes of compressed code in the genome.

0c1e9c5fb8 The word planet comes from the Greek πλανήται (planētai) 'wanderers'. In antiquity, this word referred to the Sun, Moon, and five points of light visible to the naked eye that moved across the background of the stars—namely, Mercury, Venus, Mars, Jupiter, and Saturn. Planets have historically had religious associations: multiple cultures identified celestial bodies with gods, and these connections with mythology and folklore persist in the schemes for naming newly discovered Solar System bodies. 0c1e9c5fb8 In modern astronomy, there are two primary conceptions of a planet. A planet can be an astronomical object that dynamically dominates its region (that is, whether it controls the fate of other smaller bodies in its vicinity) or it is defined to be in hydrostatic equilibrium (it has become gravitationally rounded and compacted). These may be characterized as the dynamical dominance definition and the

geophysical definition. 0c1e9c5fb8 Our world is in peril. Gaia, the spirit of the Earth can no longer stand the terrible destruction plaguing our planet. She sends five magic... 0c1e9c5fb8
