

Geographical Map Of The United States Of America

The original image was created on November 3, 2004, the day after the election, by G. Webb, a poster on yakyak.org, an Internet message board for fans of the work of Jeff... c30d771882 The list given below has been only slightly modified since it was first produced by the U.S. Geological Survey (USGS) in the early 1920s. At that time, the center for a state was found by suspending a cardboard cutout of the state by a string, and then drawing a vertical line from the suspension point. After rotating the cutout 90 degrees and drawing another vertical line from the new suspension point, the intersection of the two vertical lines was used as the geographic center. The result is dependent upon the type of projection used. c30d771882 The founders held a joint interest... c30d771882 == Overview == c30d771882 Cartography of New York City c30d771882

Geography of the United States The northern border of the United States with Canada is the world's longest bi-national land border. The term "United States", when used in the geographic sense, refers to the contiguous United States (sometimes referred to as the Lower 48, including the District of Columbia not as a state), Alaska, Hawaii, the five insular territories of Puerto Rico, Northern Mariana Islands, U. The United States shares land borders with Canada and Mexico and maritime borders with Russia, Cuba, the Bahamas, and a few other countries, mainly in the Caribbean, in addition to Canada and Mexico. S. Virgin Islands, Guam, American Samoa, and minor outlying possessions c30d771882

Geography of North America Tobago portal United States portal Geography of North America Geography of Canada Geography of the Caribbean Geography of Anguilla Geography of Antigua and North America is the third largest continent, and is also a portion of the second largest supercontinent if North and South America are combined into the Americas and Africa, Europe, and Asia are considered to be part of one supercontinent called Afro-Eurasia. With an estimated population of 580 million and an area of 24,709,000 km² (9,540,000 mi²), the northernmost of the two continents of the Western Hemisphere is bounded by the Pacific Ocean on the west; the Atlantic Ocean on the east; the Caribbean Sea on the south; and the Arctic Ocean on the north c30d771882

United States Geological Survey the disciplines of biology, geography, geology, and hydrology. S. The agency was founded on March 3, 1879, to study the landscape of the United States, its natural resources, and the natural hazards that threaten it. The agency was founded on March 3, 1879, to study the landscape of the United States, The United States Geological Survey (USGS), founded as the Geological Survey, is an agency of the United States Department of the Interior whose work spans the disciplines of biology, geography, geology, and hydrology. The agency also makes maps of planets and moons, based on data from U. space probes c30d771882

The current motto of the USGS, in use since August 1997, is "science for a changing world". The agency's previous slogan, adopted on its hundredth anniversary, was "Earth Science in the Public Service". c30d771882 == Origin == c30d771882

Jesusland map S. S. presidential election that satirizes the red/blue states scheme by dividing the United States and Canada into "The United States of Canada" and "Jesusland". scheme by dividing the United States and Canada into "The United States of Canada" and "Jesusland". The map implies the existence of a fundamental political divide between contiguous northern and southern regions of North America, the former including both the socially liberal Canada and the West Coast, Northeastern, and Upper Midwestern U. The Freakonomics blog opined that the map reflected the "despair, division, and bitterness" of the election campaign and results. Slate also covered the image and posited that it might be the reason the Canadian immigration website received six times its usual page views the day after the 2004 election. The map implies the existence of a fundamental political The Jesusland map is an Internet meme created shortly after the 2004 U. states, and suggests that these states are closer in spirit to Canada than to the more conservative regions of their own country, which are characterized by the influence of Christian fundamentalism in their political and popular culture c30d771882

== History == c30d771882 The AGS was founded by 31 New Yorkers, who were wealthy philanthropists, historians, publishers and editors. Among them were George Folsom, Henry Grinnell, Henry Varnum Poor, Hiram Barney, Alexander Isaac Cotheal, Henry Evelyn Pierrepont, S. De Witt Bloodgood, John Romeyn Brodhead, Joshua Leavitt and Archibald Russell. c30d771882 The sole scientific agency of the U.S. Department of the Interior, USGS is a fact-finding research organization with no regulatory responsibility. It is headquartered in Reston, Virginia, with major offices near Lakewood, Colorado; at the Denver Federal Center; and in NASA Research Park in California. In 2009, it employed about 8,670 people. c30d771882 The northern half of North America is sparsely populated and covered mostly by Canada, except for the northeastern portion, which is occupied by Greenland, and the northwestern portion, which is occupied by Alaska, the largest state of the United States. The central and southern portions of the continent are occupied by the contiguous United States, Mexico, and numerous smaller states in Central America and in the Caribbean. c30d771882

Cartography of the United States The history of cartography of the United States began in the 18th century, after the declared independence of the original Thirteen Colonies on July 4, 1776, during the American Revolutionary War (1776–1783). Later, Samuel Augustus Mitchell published a map of the United States in 1850. The cartography of the United States is the history of surveying and creation of maps of the United States. Maps of the New World had been produced since the 16th century. The National Program for Topographic Mapping was initiated in 1884 by the United States Geological Survey (USGS). Maps of the New World had been produced since The cartography of the United States is the history of surveying and creation of maps of the United States c30d771882

The classification hierarchy used in the 1916 publication of the American Association of Geographers was division/province/section/subsection. The

use of province in this hierarchy undoubtedly confounded the effort to develop a physiographical map consistent across the North American continent since Canada used province as the term for its first-level political subdivision. Province in Canada is a loose analogy for state in the US, and obviously would create great confusion if the same word was used in two vastly different geographical classifications. As late as 1914, the terminology used by an AAG publication used the term "natural region" as the basic denomination of physiography. That work showed 22 examples of how geographers had published works classifying North America into what had been defined... c30d771882 From 1989 through 1996, the total area of the US was listed as 3,618,780 square miles (9,372,610 km²) (land and inland water only). The listed total area changed to 3,717,813 sq mi (9,629,091 km²) in 1997 (Great Lakes area and coastal waters added), to 3,718,711 sq mi (9,631,418 km²) in 2004, to 3,718,710 sq mi (9,631,420 km²) in 2006, and to 3,794,080 sq mi... c30d771882 == See also == c30d771882 == History == c30d771882 United States National Grid c30d771882 == Area == c30d771882 Following the American Civil War, more and more American settlers began moving westward, prompting the U.S. federal government to pursue some sort of consistency for referencing landmarks on maps and in official documents. As such, on January 8, 1890, Thomas Corwin Mendenhall, superintendent of the United States Coast and Geodetic Survey Office, wrote to 10 noted geographers "to suggest the organization of a Board made up of representatives from the different Government services interested, to which may be referred any disputed question of geographical orthography." President Benjamin Harrison signed executive order 28 on September 4, 1890, establishing the Board on Geographical Names. "To this Board shall be referred all unsettled questions concerning geographic names. The decisions of the Board are to be accepted [by federal departments] as the standard authority for such matters." The board was given... c30d771882

American Geographical Society The American Geographical Society (AGS) is an organization of professional geographers, founded in 1851 in New York City. Over the century and a half of its existence, the AGS has been especially interested in three regions: the Arctic, the Antarctic, and Latin America. It is the oldest nationwide geographical organization in the United States. A signature characteristic of the AGS-sponsored exploration was the requirement that its expeditions produce tangible scientific results. The society encourages activities that expands geographical knowledge, and the interpretation of that knowledge so that it can be useful to geographers and other disciplines, especially in a policymaking environment. Most fellows of the society are Americans, but among them have always been a significant number of fellows from around the world. Most fellows of the society The American Geographical Society (AGS) is an organization of professional geographers, founded in 1851 in New York City c30d771882

The state of Hawaii is physiographically and ethnologically part of the Polynesian subregion of Oceania. U.S. territories are located in the Pacific Ocean and the Caribbean. c30d771882

List of geographic centers of the United States The geographic center of the United States is northeast of Belle Fourche This is a list of geographic centers of each U. state and inhabited territory. In 2017, a new calculation of the geographic center of North America placed it near the town of Center, North Dakota. S. state and inhabited territory. This is a list of geographic centers of each U. The geographic center of the United States is

northeast of Belle Fourche in Butte County, South Dakota (44°58'N 103°46'W), while that of the contiguous 48 states is near Lebanon in Smith County, Kansas (39°50'N 98°35'W). The geographic center of North America lies near Rugby, North Dakota (48°10'N 100°10'W), though this designation has no official status. S c30d771882

== History == c30d771882 Geography of the United States c30d771882 The continent is delimited on the southeast by most geographers at the Darién watershed along the Colombia-Panama border, placing all of Panama within North America. Alternatively, a less common view would end... c30d771882 == Historic list of geographic centers == c30d771882 Territorial evolution of the United States c30d771882

Geographic center of the United States 08°N 103°46'17. S. 60°W The geographic center of the United States is a point approximately 20 miles (32 km) north of Belle Fourche, South Dakota at 44°58'2. 60°W. 08°N 103°46'17. It has been regarded as such by the United States Coast and Geodetic Survey and the U. National Geodetic Survey (NGS) since the additions of Alaska and Hawaii to the United States in 1959. The geographic center of the United States is a point approximately 20 miles (32 km) north of Belle Fourche, South Dakota at 44°58'2 c30d771882

Physiographic regions of the United States The map was updated and republished by the Association of American Geographers in 1928. The map was updated and republished by the Association of American Geographers in 1928. Divisions of the United States, published in 1916. The map was adopted The physiographic regions of the contiguous United States comprise 8 divisions, 25 provinces, and 85 sections. The map was adopted by the United States Geological Survey by publication in 1946. The system dates to Nevin Fenneman's report Physiographic Divisions of the United States, published in 1916 c30d771882

United States Board on Geographic Names Following the American Civil War, more and more American settlers The United States Board on Geographic Names (BGN) is a federal body operating under the United States secretary of the interior. The purpose of the board is to establish and maintain uniform usage of geographic names throughout the federal government of the United States. uniform usage of geographic names throughout the federal government of the United States c30d771882
