== Epidemiology == 2c9f773950 It is through upper frontal chest discomfort (also known as cervical angina) and scapular pains which signs of cervical spine disorders are shown. In 1937 a man named Oille was the first to state that these chest pains originated from the cervical nerve root. This new outlook helped shed light on exactly what signs indicated the beginning... 2c9f773950

The cervical spine contains many different anatomic compositions, including muscles, bones, ligaments, and joints. All of these structures have nerve endings that can detect painful problems when they occur. Such nerves supply muscular control and sensations to the skull and arms while correspondingly providing our bodies with flexibility and motion. However, if the cervical spine is injured it can cause many minor or traumatic problems, and although these injuries vary specifically they are more commonly known as "cervical spine disorders" as a whole. 2c9f773950 Neurosurgeons or orthopaedic surgeons manage any detected injury. Today, most large centers have spine surgery specialists, that have trained in this field after their orthopedic or neurosurgical residency. 2c9f773950 == History and examination == 2c9f773950

Cervical fracture In younger populations A cervical fracture, commonly called a broken neck, is a fracture of any of the seven cervical vertebrae in the neck. are the most common mechanism of injury.), primarily via compromising neurological supply to the respiratory muscles and innervation to the heart. Abnormal movement of neck bones or pieces of bone can cause a spinal cord injury, resulting in loss of sensation, paralysis, or usually death soon thereafter (~1 min. Examples of common causes in humans are traffic collisions and diving into shallow water. The relative incidence of cervical spine fracture is increased significantly with age 2c9f773950

Clearing the cervical spine This process can take place in the emergency department or in the field by appropriately trained EMS personnel. Clearing the cervical spine is the process by which medical professionals determine whether cervical spine injuries exist, mainly regarding cervical fracture Clearing the cervical spine is the process by which medical professionals determine whether cervical spine injuries exist, mainly regarding cervical fracture. It is generally performed in cases of major trauma 2c9f773950
